

Chapter 29 Light Waves
Diffraction and Interference—continued

2. Look at the construction of overlapping circles on your classmates' papers. Some will have more nodal lines than others, due to different starting points. How does the number of nodal lines in a pattern relate to the distance between centers of circles (or sources of waves)?

3. Figure 29.18 from your textbook is repeated below. Carefully count the number of wavelengths (same as the number of wave crests) along the following paths between the slits and the screen.

- Number of wavelengths between slit A and point a is _____
- Number of wavelengths between slit B and point a is _____
- Number of wavelengths between slit A and point b is _____
- Number of wavelengths between slit B and point b is _____
- Number of wavelengths between slit A and point c is _____
- Number of wave crests between slit B and point c is _____

4. When the number of wavelengths along each path is the same or differs by one or more whole wavelengths, interference is _____

[constructive] [destructive]

and when the number of wavelengths differ by a half wavelength (or odd multiples of a half wavelength), interference is _____

[constructive] [destructive].

It's nice how knowing some physics really changes the way we see things!

Instructor's Manual to Accompany Conceptual Physics Paul G. Hewitt, 1977 *Quantum Communication, Computing, and Measurement* Osamu Hirota, A.S. Holevo, C.M. Caves, 2012-12-06 This volume contains the proceedings of the Third International Conference on Quantum Communication and Measurement The series of international conferences on quantum communication and

measurement was established to encourage scientists working in the interdisciplinary research fields of quantum communication science and technology. The first such conference organized by C Benjaballah and O Hirota under the title Quantum Aspects of Optical Communication assembled approximately 80 researchers in Paris in 1990. The second conference held in Nottingham in 1994 was organized by V P Belavkin, R L Hudson and O Hirota and attracted about 130 participants from 22 countries. The present conference organized by O Hirota, A S Holevo, C M Caves, H P Yuen and L Accardi was held September 25-30, 1996 in Fuji Hakone Land, Japan and involved about 120 researchers from 15 countries. The topics at this third conference included the foundations of quantum communication and information theory, quantum measurement theory, quantum cryptography and quantum computation, quantum devices and high precision measurements, generation of nonclassical light and atom optics. Special emphasis was placed on bringing together research workers in experimental and engineering fields of quantum communication and quantum computing and theoreticians working in quantum measurement and information theory. Nineteen plenary and parallel sessions and one poster session were organized at which a total of 82 papers were presented. Interesting and stimulating scientific discussions took place between and after sessions as well as in the evenings.
