

**CONCEPTUAL Physics** PRACTICE PAGE**Chapter 17 Change of Phase**  
**Ice, Water, and Steam**

All matter can exist in the solid, liquid, or gaseous phases. The solid phase normally exists at relatively low temperatures, the liquid phase at higher temperatures, and the gaseous phase at still higher temperatures. Water is the most common example, not only because of its abundance but also because the temperatures for all three phases are common. Study "Energy and Changes of Phase" in your textbook and then answer the following:

1. How many calories are needed to change 1 gram of  $0^{\circ}\text{C}$  ice to water?

2. How many calories are needed to change the temperature of 1 gram of water by  $1^{\circ}\text{C}$ ?

3. How many calories are needed to melt 1 gram of  $0^{\circ}\text{C}$  ice and turn it to water at a room temperature of  $23^{\circ}\text{C}$ ?

4. A 50-gram sample of ice at  $0^{\circ}\text{C}$  is placed in a glass beaker that contains 200 g of water at  $20^{\circ}\text{C}$ .

a. How much heat is needed to melt the ice?

b. By how much would the temperature of the water change if it gave up this much heat to the ice?

c. What will be the final temperature of the mixture? (Disregard any heat absorbed by the glass or given off by the surrounding air.)

5. How many calories are needed to change 1 gram of  $100^{\circ}\text{C}$  boiling water to  $100^{\circ}\text{C}$  steam?

*Defining an Identity* P.J. Fensham, 2012-12-06 Research in science education is now an international activity This book asks for the first time Does this research activity have an identity It uses the significant studies of more than 75 researchers in 15 countries to see to what extent they provide evidence for an identity as a distinctive field of research It considers trends in the research over time and looks particularly at what progression in the research entails It provides insight into how researchers influence each other and how involvement in research affects the being of the researcher as a person It addresses the relation between research and practice in a manner that sees teaching and learning in the science classroom as interdependent with national policies and curriculum traditions about science It gives graduate students and other early researchers an unusual overview of their research area as a whole Established researchers will be interested in and challenged by the identity the author ascribes to the research and by the plea he makes for the science content itself to be seen as problematic
