

Laboratory: Organic Molecule Models

(This lab was developed by Laura Sonnichsen and modified by Laura Sonnichsen and Virginia Lehmann.)

Report Requirement: Answer all of the questions/do all the computations requested in *italics*. Questions not in italics do NOT need to be answered. You do NOT have to write a formal lab report. You should write your answers into a word processing program and save the file either as a Rich Text Format (.rtf) or html file. Go into the Lab – Organic Molecules Report and cut and paste the answers to each question in the appropriate space. (Lab – Organic Molecules Report can be found on the Content page or under Assignments → Quizzes.)

There is also a drop box for questions 2, 3, 4, 6 & 7. For questions 2, 3, 4 & 7 either neatly hand-draw the structures and then scan to a .pdf file or take a picture and save as a .jpg file OR type your structures in a document and save as .html, .rtf or .pdf file. For question 6, take a picture and save as a .jpg file. (Lab – Organic Molecules drop box can be found under Assignments → Dropbox)

Labs not submitted in the appropriate area will *not* be graded.

Report Scoring: 20 points total (each part). Questions valued as marked.

Working with a Partner: You are permitted to work with a partner. If you do so, the experimental data reported may be the same, but you need to write your own answers to each question (this includes drawings. Everyone is to do their own drawings). At the beginning of each question you should note that you worked with a partner by writing "Lab Partner (fill in name)."

Materials:

- Model kit (found in CHE 106 Lab Kit)
- Protractor (to measure angles): If you do not have a protractor at home, a quick Google image search on "protractor" should yield many pictures of protractors. You can print one off to use, but it is recommended that you make the picture fairly small – no bigger than half a page.

Goals:

1. To help you visualize the 3-D structure of organic molecules.
2. To teach you how to use model kits
3. To learn how to differentiate among the three types of isomers (structural, geometric, and stereoisomers)

Laboratory Manual of Pharmaceutical Organic Chemistry I Mr. Sushant Sudhir Pande, Dr. Prashant D. Aragade, Dr. Saurabh C. Khadse, Dr. Niranjana S. Mahajan, 2024-02-16 We are pleased to put forth the Laboratory Manual of Pharmaceutical Organic Chemistry I This manual prepared according to the PCI B Pharm course regulations 2014 is divided into three sections systematic qualitative analysis preparation of suitable solid derivatives and construction of molecular models The methods of all the experiments are drawn from the latest editions of official books of pharmaceutical organic chemistry and research papers ensuring the inclusion of the latest advancements in methodologies or apparatus This manual is designed for outcome based education Each experiment follows a uniform format with sections for practical significance practical outcomes PrOs mapping with course outcomes theory resources used procedure precautions observations results conclusion references and synopsis questions Each experiment offers an opportunity for students to perform practical work developing proficiency in effectively managing equipment handling glassware chemicals reagents and writing analytical reports In addition the questions at the end of the experiments help to enhance students knowledge benefiting them as they pursue higher studies During the laboratory period you will have to multiple tasks while performing the experiment It is essential to document your actions and observations thoroughly as you proceed Always plan your work ahead considering what you are doing why you are doing it what is happening and what conclusions you can draw from your experiment We acknowledge the help and cooperation of various individuals in bringing out this manual We are highly indebted to the authors of the books and articles mentioned in the references which were a major source of information for this manual We also thank the publishers designers and printers who worked hard to publish this manual in a timely manner We hope that this manual will be helpful to students in understanding concepts principles and performing procedures We wish you all the best

Introduction to Organic Research Ebenezer Emmet Reid, 1924 *Transport and Fate of Acetone in an Outdoor Model Stream, Stennis Space Center Near Bay St. Louis, Mississippi*, 1990 *Studies on Life at the Energetic Edge - from Laboratory Experiments to Field-Based Investigations, Volume II* Mark Alexander Lever, Bo Barker Jorgensen, Jan Amend, Victoria Orphan, Tori Hoehler, 2024-01-16 In collaboration with Microenergy 2022 The 4th International Workshop on Microbial Life under Extreme Energy Limitation we are proud to launch Volume II of Studies on Life at the Energetic Edge from Laboratory Experiments to Field Based Investigations This workshop focuses on the energy controls on microbial life and the exploration of the biological demand for energy Genetic adaptations and phenotypic traits that enable microorganisms to tolerate long periods of energy limitation have attracted broad scientific interest in recent years Laboratory based cultivation experiments have shown that the potential to survive weeks to months in the absence of energy inputs occurs across a phylogenetically wide range of microbes Studies on natural environments have shown that energy limitation is pervasive across most habitats on Earth from highly metabolically active surface habitats to subsurface

environments that have been cut off from new energy inputs for thousands of years Yet much remains to be learned about the evolutionary adaptations and life history traits that enable microorganisms to live under low energy conditions Similarly the spectrum of energy sources and metabolisms that enable and support life on Earth and potentially elsewhere in the Universe is far from constrained *Introduction to Organic Laboratory Techniques* Donald L. Pavia,2007 Resumen Taking an organic chemistry laboratory course You need a manual you can trust This proven laboratory manual gives you what you need to conduct a variety of interesting microscale experiments with safety and ease while you develop an understanding of the special techniques these type of experiments require The authors have increased the book s green approach giving you the clearly written information and instruction to conduct chemical experiments in a more environmentally friendly way Many of the book s experiments have been modified to use new techniques and reduce the use of hazardous solvents and reagents You ll find fascinating essays that add real life relevance and understanding to each experiment including Identification of Drugs Petroleum and Fossil Fuels Detection of Alcohol The Breathalyzer and Fireflies and Photochemistry

however there is not a clear avenue for those that have changed their teaching methods based on published CER and report their experiences Creating this article collection will foster collaboration between chemical education researchers and teachers of organic chemistry This opportunity allows these instructors to share evidence based practices experiences challenges and innovative approaches from CER literature and beyond This Research Topic bridges discipline based education research and the scholarship of teaching and learning which will help advance organic chemistry education and improve student outcomes
