

Abstract

Colorectal cancer (CRC) exhibits complex heterogeneity driven by microenvironmental factors. Folate metabolism, essential for nucleic acid synthesis, paradoxically influences CRC pathogenesis: deficiency suppresses tumor growth, while supplementation may accelerate established tumors. Central to this is methylenetetrahydrofolate reductase (MTHFR), whose polymorphisms (e.g., C677T, A1298C) alter the methylation-nucleotide synthesis balance in a context-dependent manner. MTHFR variants interact with Consensus Molecular Subtypes (CMS) (metabolic dysregulation), CMS2/4 (WNT/stromal-driven)—to illustrate, CMS1 tumors may exploit folate for immune evasion, while CMS2/4 subtypes rely on folate-mediated epigenetic reprogramming. Harnessing these subtype-specific vulnerabilities, treating CRC as a monolith is insufficient. From Mendelian randomization, preclinical models, and subtype-specific clinical advances: (1) Subtype-Driven Folate; (2) Dependency Biomarkers; (3) Crosstalk.

The Realities of Reality - Part II: Making Sense of Why Modern Science Advances (Volume 1) Fritz Dufour, MBA, DESS, 2018-09-19 This Volume 1 of Part II considers the factors that make science progress It lays out the differences between normal science and pseudoscience by showing the importance of the scientific method in the advancement of science It introduces the concept of Truth in science by raising the point that even though truth is based on the scientific method can science be true Can it depict reality The author focuses on modern science which he thinks was born thanks to the Scientific Revolution which started with Galileo Galilei and led to the Industrial Revolution The impacts of the latter is analyzed in light modernism modernization and modernity all three linked to scientific progress The book also talks about the Newtonian scientific leap by analyzing particularly the then social and political fabrics of England and Albert Einstein by showing how he changed history According to the author our very physical world can help us understand scientific progress So he explains among other things the structure of atoms and molecules the role of physics in the understanding of our universe Quantum Mechanics and the importance of Higgs Boson On the other hand the book is a stunning revelation of how important information is to scientific progress To make his point the author first talks about John Vincent Atanasoff as the Father of computer thanks to the invention of his ABC computer and then Alan Turing as the Father of modern computer thanks to his Turing Test and his views on Artificial Intelligence Both men played a momentous role in the Digital Revolution and in the Information Age according to the book Finally the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material

The Realities of 'Reality' - Part II: Making Sense of Why Modern Science Advances (Volume 2 of 2) Fritz Dufour, MBA, DESS, 2019-03-23 The difference between Part I and Part II Volumes 1 2 of this series is that in Part I the

author showed how what we call reality starts with the inner self whereas Part II describes what in fact impacts and modifies the environment or reality and what are the factors behind that dynamics What impacts and modifies the environment is science This Volume 2 starts by showing how technology plays an important role in scientific progress Although the relationship between the two is symbiotic science can exist without technology but technology desperately needs science Military technology is an example of how technology can help science advance Some military inventions end up having civilian use Science being at the center of society the book makes the case for the direct impact of such social sciences as politics and economics on the advancement of science Politics says the author influences science because of uncertainty in science and economics does it thanks to the availability of money to scholars and scientists for their research On the other hand government also influences scientific progress through regulations The book gives cyberspace regulation as an example Furthermore by showing how art influences science the author really argues for the polyfactorial aspect of scientific progress In that line of thought he goes on to also prove that factors such as skepticism curiosity and the quest for knowledge greatly influence the advancement of science That says the author is a ninety degree turn By ending Part two that way I wanted to somehow link it to Part I which argues that reality starts from within
