Science News Letter ,1926 *Science News-letter* ,1962 *Science News* ,2008 **A Young Scientist's Guide to Faulty Freaks of Nature** James Doyle,2013-02-07 Includes 20 experiments for the sink bathtub and backyard Are you intrigued by the effects of smog or methane clouds the Harry Potter dinosaur the Australian blue bird that screeches chainsaw noises ocean snot or the pink tentacles in the Korean dish where they swallow wriggling tentacles Then strap on your hat for adventure and learn how planet Earth has been modified by the crazy chemistry of birdbrained biology and foolhardy physics of humans The Young Scientist s Guide to Faulty Freaks of Nature is your guide to some of the strangest science ever seen and in it you ll discover that some of the things scientists told you were wrong were actually right Fictional hobbits They are real You ll even meet an all new creature called a spider goat So if you have a thirst for the weird the wonderful and the downright wacky then this is the science book for you **The Re-emergence of Values in Science Education** Deborah Corrigan,Justin Dillon,Richard Gunstone,2007 Issues relating to values have always had a place in the school science curriculum Sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with STS emphases Of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum One obvious very broad difference of this form is the central place in science education thinking in many European countries of bildung and the complete absence of this construct from most science curriculum thinking in English speaking contexts There are numbers of such country cultural differences In the 1990s many countries moved towards various conceptualizations of Outcomes Based Education OBE sometimes so labelled and sometimes not It was usual but not universal for OBE focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic Currently there are a number of education systems that are changing again and choosing to move away from Outcomes Based Education for example South Africa and several Australian states One of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education *What Girls Say about Their Science Education Experiences* Michael Papadimitriou,2004-07 What Girls Say About Their Science Education Experiences describes the science education experiences of 12 young ladies enrolled in advanced science courses in a Southeast Texas High School What Girls Say includes profiles of each girl and topical chapters dealing with generalizations about the key elements of experience that the girls illuminated Also a detailed review of the current literature related to girls and science is provided The strength of the text lies in the use of the participants words to describe their own experiences Unfortunately despite over

30 years of research related to gender and science education females still are underrepresented in some upper level high school science courses particular college science curricula and majors and many scientific careers While boys and girls enter school with equal ability girls are marginalized in science and math to the point that they trail males in science interest and participation by graduation time However such differences have decreased While attitudes achievement levels and the other components of the science education experience have been quantitatively examined very little qualitative analysis exists to describe the educational experience of females in American high school classrooms from the perspective of the student A description of this phenomenon as constructed through the experiences of female students represents a worthy pursuit This book represents an attempt to describe this phenomenon as constructed through the experiences of female students Very simply the purpose of this book was to describe the essential elements of the current science education experience as constructed by female physics and advanced chemistry students The construct of science education experience for females included perceived a affective attitudes b achievement and success c ability d cultural factors e social psychological factors f interpersonal factors and g instructional teacher factors All of these topics are addressed in What Girls Say About Their Science Education Experiences **Popular Science News** ,1883 **Science Blogging** Christie Wilcox,Bethany Brookshire,Jason G. Goldman,2016-01-01 Here is the essential how to guide for communicating scientific research and discoveries online ideal for journalists researchers and public information officers looking to reach a wide lay audience Drawing on the cumulative experience of twenty seven of the greatest minds in scientific communication this invaluable handbook targets the specific questions and concerns of the scientific community offering help in a wide range of digital areas including blogging creating podcasts tweeting and more With step by step guidance and one stop expertise this is the book every scientist science writer and practitioner needs to approach the Wild West of the Web with knowledge and confidence **Values in Science Education** Deborah Corrigan,Cathy Bunting,Angela Fitzgerald,Alister Jones,2020-05-18 In 2007 the Monash Kings College London International Centre for the Study of Science and Mathematics Curriculum edited a book called The Re emergence of Values in Science Education This book reflects on how values have been considered since this original publication particularly in terms of socio cultural economic and political factors that have impacted broadly on science technology and society and more specifically on informal and formal science curricula Hence the title of this book has been framed as Values in Science Education The shifting sands As in the first book this collection focuses on values that are centrally associated with science and its teaching and not the more general notion of values such as cooperation or teamwork that are also important values in current curricula Such values have indeed become more of a focus in science education This may be a response to the changing global context where technological changes have been rapid and accelerating In such complex and risky environments it is our guiding principles that become the important mainstays of our decisions and practices In terms of science education what is becoming clearer is that traditional content and traditional science and

scientific methods are not enough for science and hence science education to meet such challenges While shifts in values in science education continue tensions remain in curriculum development and implementation as evidenced by the continued diversity of views about what and whose values matter most **The Popular Science News and Boston Journal of Chemistry** ,1874 *The Editor* ,1928 *Nature* Sir Norman Lockyer,1928 **Public Understanding of Science** ,2008 A forum for the emerging interdisciplinary field of public understanding of science this journal encourages open debate of contrasting and even conflicting viewpoints on all aspects of the interrelationships between science and the public
