

A producer is a living thing that makes its own food from sunlight, air, and soil. Green plants are producers who make food in their leaves.

A consumer is a living thing that cannot make its own food. Consumers get their energy by eating food. All animals are consumers.

A decomposer is a living thing that gets energy by breaking down dead plants and animals. Fungi and bacteria are the most common decomposers.

**Women's Role in Food Chain Activities and the Implication for Nutrition** Gerd Holmboe-Ottesen, Ophelia Mascarenhas, Margareta Wandel, 1989      *Activity Patterns in Small Mammals* S. Halle, N.C. Stenseth, 2012-12-06

Environmental conditions change considerably in the course of 24 h with respect to abiotic factors and intra and interspecific interactions. These changes result in limited time windows of opportunity for animal activities and hence the question of when to do what is subject to fitness maximisation. This volume gives a current overview of theoretical considerations and empirical findings of activity patterns in small mammals, a group in which the energetic and ecological constraints are particularly severe and the diversity of activity patterns is particularly high. Following a comparative ecological approach for the first time, activity timing is consequently treated in terms of behavioural and evolutionary ecology, providing the conceptual framework for chronoecology as a new subdiscipline within behavioural ecology. An extensive Appendix gives an introduction to methods of activity modelling and to tools for statistical pattern analysis.

**Encyclopedia of Meat Sciences** Carrick Devine, M. Dikeman, 2004-08-19. The Encyclopedia of Meat Sciences is an impressive and important body of work. Prepared by an international team of experts, this reference work covers all important aspects of meat science from stable to table, including animal breeding, physiology and slaughter, meat preparation, packaging, welfare and food safety, to name a few. This Encyclopedia further covers important topics such as food microbiology, meat in human nutrition, biotechnological advances in breeding and many more. The Encyclopedia of Meat Sciences is an invaluable resource to practitioners of meat science and students alike. Also available online via ScienceDirect, featuring extensive browsing, searching and internal cross referencing between articles in the work, plus dynamic linking to journal articles and abstract databases, making navigation flexible and easy. For more information, pricing options and availability, visit [www.info.sciencedirect.com](http://www.info.sciencedirect.com).

Foreword written by Rt Hon Helen Clark, Prime Minister of New Zealand. Over 200 articles covering all aspects of meat science. Reading lists at the end of each article provide further information into primary literature. Various figures and tables illustrating the text and a color plate section in each volume. Appeals to students, academics, researchers and professionals working not only in meat science but also food science, veterinary sciences, agricultural engineering and livestock management. Extensive cross referencing.
