

## 10.1 Cell Growth, Division, and Reproduction

### Lesson Objectives

- Explain the problems that growth causes for cells.
- Compare asexual and sexual reproduction.

### Lesson Summary

**Limits to Cell Size** There are two main reasons why cells divide:

- ▶ **Information “overload”:** The larger a cell gets, the more demands it places on its DNA. Eventually, the cell’s DNA cannot meet the cell’s needs.
- ▶ **Exchange of materials:** Cells take in nutrients and eliminate wastes through the cell membrane.
  - The larger a cell’s volume, the more materials it needs to function and the more waste it creates.
  - A cell’s volume increases at a faster rate than its surface area. As a cell grows, its surface-area-to-volume ratio becomes too small.
  - The larger a cell gets, the harder it is for enough materials to move across its cell membrane.
- ▶ **Cell division** solves the information overload and materials exchange problems.

**Cell Division and Reproduction** Cell division is part of both types of reproduction:

- ▶ **Asexual reproduction:**
  - produces genetically identical organisms.
  - occurs in many single-celled organisms and in some multicellular organisms.
  - allows rapid reproduction of organisms in favorable environments.
- ▶ **Sexual Reproduction:**
  - produces organisms with genetic information from both parents.
  - occurs in most animals and plants and in many single-celled organisms.
  - increases genetic diversity, which aids species survival in changing environments.

J. C. Harris,2014-07-15 Cell Growth and Cell Division is a collection of papers dealing with the biochemical and cytological aspects of cell development and changes in bacterial plant and animal systems One paper discusses studies on the nuclear and cytoplasmic growth of ten different strains of the genus Blepharisma in which different types of nutrition at high and low temperatures alter the species to the extent that they became morphologically indistinguishable The paper describes the onset of death at high and low temperatures as being preceded by a decrease in the size of the cytoplasm and a corresponding decrease in the size of the macronucleus The moribund organisms still possessing structure are motionless

with no distinguishable macronuclear materials Another paper presents the response of meiotic and mitotic cells to azaguanine chloramphenicol ethionine and 5 methyltryptophan The paper describes the failure of spindle action arrest of second division inhibition of cytokinesis aberrant wall synthesis and alterations in chromosome morphology in meiosis cells In the case of mitosis a single enzyme thymidine phosphorylase shows that reagents which inhibit protein synthesis also inhibit the appearance of that enzyme if the reagent is applied one day before it normally appears Other papers discuss control mechanisms for chromosome reproduction in the cell cycle as well as the force of cleavage of the dividing sea urchin egg The collection can prove valuable for bio chemists cellular biologists micro biologists and developmental biologists
