

Checkpoints for security authentication

- Decide which implementation of security authentication service will be used.
- The Spectrum Scale 4.1.1 supports only one authentication method at a time and changing it later is not recommended. Therefore, it is important to carefully decide and select the method up-front.

Implementation

The installation, implementation, and configuration tasks are grouped into major steps of the installation process. Each step is performed sequentially and in most cases, must be completed before the next step can begin.

- Follow the implementation task checklist.
- Unpack, rack, and cable hardware.
- Conduct power-on self-test (POST) and self-check.
- Validate license keys, licenses, and install the latest software.
- Initialize the system.
- Perform base configuration.
- Perform manual setup and configuration changes.
- Plan and configure networking.
- Set up alerting and call-home capabilities.
- Set up directory services and security authentication services.
- Run health check of system.
- Define user security functions and access privileges.
- Configure storage controller and logical disks.
- Configure antivirus capabilities.
- Configure and use file services.

Tips from prior implementations: Some tasks might not apply to a system or environment, and it would be beneficial to have tasks corroborated and validated with IBM teams, prior to the start of any implementation project:

1. Make sure to download and use the correct version of the Spectrum Scale 4.1.1 software configuration guide before you start your Spectrum Scale 4.1.1 planning and installation efforts.
2. Save all your TDA documents and the completed software configuration guide for easy reference at a later date.
3. Save a physical copy of these completed documents in the rack / cabinet of the Spectrum Scale installed system.
4. It is absolutely necessary to have a completed, verified, and validated TDA worksheet before starting any Spectrum Scale installation. More eyes during the TDA and planning processes are definitely helpful, and this effort catches more errors in the planning stage before the actual installation. This diligence prevents wrong assumptions, incorrect planning, configuration errors, and other issues.
5. IBM Spectrum Scale is a complicated system with its built-in intelligence. Any pre-existing inefficiencies or errors in a client network need to be corrected, and addressed prior to its use.
