Computer Science Department, 1989 Abstract This thesis uses detailed physical models to derive algorithms for computer vision General models are adopted which describe the interaction of light with surfaces in image formation Objects are modeled in terms of their geometric and physical properties From the models I examine the structure of reflectance functions and derive several vision algorithms The first algorithm contributes to color image segmentation This

algorithm is used to classify surfaces according to material composition Two other algorithms are derived which are used to infer intrinsic properties of an object from an image The first algorithm is used to infer local surface shape from specular reflection The second algorithm is used to infer surface spectral reflectance Experimental results obtained using these algorithms are presented **Stochastic [omega]-regular Games** Krishnendu Chatterjee,2007 Constructing and
