*Intelligent Software Agents* Walter Brenner, Rüdiger Zarnekow, Hartmut Wittig, 2012-12-06

2 chapter contains examples of intelligent agents arranged according to their application areas Chapter 7 closes with a prospective view of the future development of intelligent agents

Everyone concerned with the Internet and the new possibilities of information and communication technology knows that nowadays there is no area that is developing faster

The authors are aware of the dynamics of this research area and its effects when they describe such a fast developing area in a slow traditional medium like a book

One thing is sure today when the book appears on the market new intelligent agents will already exist and some of the hypotheses made by this book will have been shown to be incorrect

Why despite this does it make sense to write a classical book on this subject

Is there an alternative

Experience shows that the majority of the people in business and public life who make decisions on the use of new technologies continue

to prefer books and articles in periodicals rather than electronic sources such as the Internet Or is there some other reason for the enormous success of Nicolas Negroponte s book Being Digital which we thank for multimedia and many concepts of the digital and networked world and even intelligent agents Today a book is still the only way to establish a new area
