

Interpersonal	Interpretive	Presentational
Speaking	Reading or Listening	Writing or Speaking
Students use the interpersonal mode of communication when speaking to others. Information is exchanged, facial expressions and gestures are natural and important. Interpersonal communication is spontaneous and unrehearsed, and partner selection is random. This is the mode that measures how well students speak the language and is the mode that prepares them to interact with native speakers in natural ways.	The interpretive mode refers to the ability to understand the target language in both written and spoken form. Students may not understand every word, but are expected to understand main ideas and key words. This is one-way communication, so students must be able to understand the spoken or written text on their own. Students will use English to demonstrate what they understand.	The presentational mode allows students to plan and rehearse what they will write or say. In writing, students have time to draft and revise before producing a final product. In speaking, students may be able to rehearse and/or to record multiple times until they are satisfied with the final product. Students create presentations that will be shared with the class and beyond, when possible.
		

Collaborative Writing

Collaborative or team writing is the process of producing a written work as a group where all team members contributed to the content and the decisions about how the group will function. Group assignments can be difficult for many students with busy schedules because they require planning, coordination, and frequent communication with other students.

The Collaborative Writing Process

1. Planning

Planning includes everything that is done before writing. In collaborative writing, this is a particularly important step since it's crucial that all members of a team agree about the basic elements of the project and the logistics that will govern the project's completion. Collaborative writing—by its very definition—requires more communication than individual work since almost all co-authored projects oblige participants to come to an agreement about what

physics motion numerical solved and worksheet for class 9 - Sep 03 2023

web solution initial velocity $u = 6.0 \text{ m/s}$ final velocity $v = 4.4 \text{ m/s}$ because direction of ball has become opposite time 0.04 s thus acceleration $a = \frac{v - u}{t} = \frac{4.4 - 6.0}{0.04} = \frac{-1.6}{0.04} = -40 \text{ m/s}^2$ after multiplying -40 by 100 to make calculations simpler we get a
