**Force and Acceleration**

1. Skully the skater, total mass 25 kg, is propelled by rocket power.

(Neglect resistance.)

TABLE I

b. Complete Table II for a constant 50-N resistance.

TABLE II

2. Block A on a horizontal friction-free table is accelerated by a force from a string attached to Block B. Block B falls vertically and drags Block A horizontally. Both blocks have the same mass,  $m$ . (Neglect the string's mass.)

- a. The mass of the system (A + B) is [  $m$  ] [  $2m$  ].
- b. The force that accelerates (A + B) is the weight of [ A ] [ B ] [ A + B ].
- c. The weight of B is [  $mg/2$  ] [  $mg$  ] [  $2mg$  ].
- d. Acceleration of (A + B) is [ less than  $g$  ] [  $g$  ] [ more than  $g$  ].
- e. Use  $a = \frac{F}{m}$  to show the acceleration of (A + B) as a fraction of  $g$ . \_\_\_\_\_

If B were allowed to fall by itself, not dragging A, then wouldn't its acceleration be  $g$ ?

Yes, because the force that accelerates it would only be acting on its own mass — not twice the mass!

Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of

publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
