

## Ch 6 Conceptual Questions

<https://openstax.org/books/college-physics/pages/6-conceptual-questions>

**1.** There is an analogy between rotational and linear physical quantities. What rotational quantities are analogous to distance and velocity?

Angular velocity is analogous to velocity and angular displacement is analogous to distance.

**6.** Race car drivers routinely cut corners as shown in **Figure 6.32**. Explain how this allows the curve to be taken at the greatest speed.

It provides the greatest speed because it minimizes the curve angle which creates less lateral force and this also creates more speed.  $AV = v^2/r$

**14.** Is there a real force that throws water from clothes during the spin cycle of a washing machine? Explain how the water is removed.

The spinning drum pushes inward on the clothes and water. There are holes in the drum and when water gets in them, the drum can't push out the water so, tangentially to the rotation, the water is removed and separated from the clothes. Inertia

**20.** Two friends are having a conversation. Anna says a satellite in orbit is in freefall because the satellite keeps falling toward Earth. Tom says a satellite in orbit is not in freefall because the acceleration due to gravity is not  $9.80 \text{ m/s}^2$ . Who do you agree with and why?

I agree with Anna because the satellite is freely falling toward Earth and this is due to gravity, and its going really fast sideways.
