

Electromagnetic Induction & A. C. (Conceptual Question)

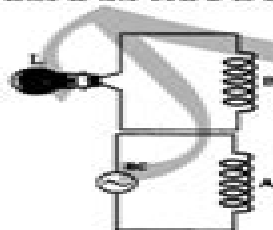

1. Give the direction in which the induced current flows in the wire loop, when the magnet moves towards it as shown in fig.

2. The south pole of a magnet is brought near a conducting loop. What is the direction of induced current as observed by a person on the other side of the loop.

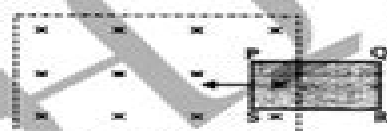

3. A coil B is connected to low voltage Bulb L and placed near another coil A as shown in fig. Explain the following observations. (i) Bulb lights (ii) Bulb get dimmer if the coil B is moved upwards.

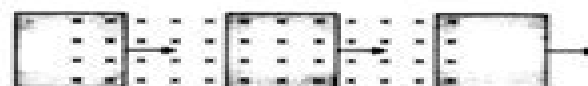

4. Two straight and parallel wires A and B are being brought towards each other. If current in A be i , what will be the direction of induced current in B? If A and B are taken away from each other, then?
5. Two inductors L_1 and L_2 sufficient distance apart are connected (i) in series (ii) in parallel. What is their equivalent inductance?

6. The closed loop PQRS is moving into a uniform magnetic field acting at right angles to the plane of the paper as shown in fig. State the direction in which the induced current flows in the loop.

7. Find the induced current in the circular loop KLMN of radius r , if the straight wire PQ carries a steady current of 1 ampere?
8. A uniform magnetic field exists normal to the plane of the paper over a small region of space. A rectangular loop of wire is slowly moved with a uniform velocity across the field as shown in fig.

9. Fig. shows two identical rectangular loops (1) and (2), placed on a table along with a straight long current-carrying conductor between them.

- (i) What will be the direction of the induced currents in the loop when they are parallel away from the conductor with some velocity v ?
- (ii) Will the emf induced in the two loops be equal? Justify your answer?
