**pg. 30 Review Questions**

9. Cite Newton's 1<sup>st</sup> law of motion.

**Ans.** An object at rest will remain at rest. An object in motion will remain in motion at a constant velocity, unless an unbalanced force is applied to it.

10. What is the net force on a cart that is pulled to the right with 100 pounds of force and to the left with 30 pounds of force?

**Ans.** 70 pounds to the right.

11. Why do we say that force is a vector quantity?

**Ans.** To know the complete value of a force we must know its magnitude and direction. Anything that has both magnitude and direction is given the name vector.

14. What is the net force on a bag pulled down by gravity with 18 newtons and pulled upward by a rope with a force of 18 newtons.

**Ans.** 0 newtons.

15. What does it mean to say that something is in mechanical equilibrium?

**Ans.** When an object is in mechanical equilibrium, the sum of all the forces on it are zero and it therefore cannot accelerate.

17. Consider a book that weighs 15 newtons at rest on a flat table. a) How many newtons of support force does the table provide? b) What is the net force on the book in this case?

**Ans.** a) Because the net force is 0 and we are told that the book is pushing down on the table with a force of 15 newtons, we must conclude that the table is pushing up on the book with a force of 15 newtons.

b) Because the book is at rest on the table, those of us that believe in Newton's 1st law of motion know that the net force on the book must be zero.

20. What is the test for whether a moving object is in equilibrium?

**Ans.** If an object is not accelerating, then it is in equilibrium.

## **Conceptual Physics Chapter 2 Review Questions:**

*From Atoms to Galaxies* Sadri Hassani, 2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience. In an effort to help stem this disturbing trend *From Atoms to Galaxies: A Conceptual Physics Approach to Scientific Awareness* teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small. Written by Sadri Hassani, the author of several mathematical physics textbooks, this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible. Some of you might want to know: How did Galileo come to think about the first law of motion? Did Newton actually discover gravity by way of an apple and an accident? Or maybe you have mulled over: Is it possible for Santa Claus to deliver all his toys? Is it possible to prove that Elvis does not visit Graceland every midnight? Or perhaps you've even wondered: If ancient Taoism really parallels modern physics? If psychoanalysis can actually be called a science? How is it that some philosophies of science may imply that a 650-year-old woman can give birth to a child? No Advanced Mathematics Required. A primary textbook for undergraduate students not majoring in physics, *From Atoms to Galaxies* examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics. It explains quantum physics, relativity, nuclear and particle physics, gauge theory, quantum field theory, quarks and leptons, and cosmology. Encouraging students to subscribe to proven causation rather than dramatic speculation, the book defines the often obscured difference between science and technology, discussing how this confusion taints both common culture and academic rigor. Explores the various philosophies of science, demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness. Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science. Based on courses taught by the author for over 15 years, this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background. To accomplish this, the book lays the foundation of the laws that govern our universe in a nontechnical way, emphasizing topics that excite the mind, namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues. It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology. Each chapter includes essays which use the material developed in that chapter to debunk misconceptions, clarify the nature of science, and explore the history of physics as it relates to the development of ideas. Noting the damage incurred by confusing science and technology, the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology.
