Besides describing the biological bases of human behaviour, it examines different types of psychological tests which are conducted to differentiate one individual from another. This student-friendly book also elaborates the processes of learning and memory, the nature and types of memory and other important aspects of human behaviour such as motivation, emotion and intelligence. The James Lange and Cannon-Bard theories of emotion, psychometric theory and cognitive theory of intelligence are also thoroughly dealt with. Finally, different concepts of personality and techniques of assessment of personality are explained. **Key Features** Includes a number of figures and illustrations to clarify the concepts. More than any other terrorist tactic, they convey the ruthless willingness of present-day terrorists to kill themselves for killing others. Since September 11, 2001, the number of suicide attacks around the world has risen dramatically, causing on average far more fatalities per attack than other forms of terrorism. What drives a person to kill himself for killing others in the name of a political or religious cause? This book is the first to report a series of studies in which failed suicide bombers and organizers of suicide attacks were subjected to systematic clinical psychological interviews and tests and were compared to non-suicide terrorists. This direct psychological examination enabled a first-hand assessment of the personality characteristics and motivation of suicide bombers. Additional interviews conducted by seasoned area specialists provided a comprehensive picture of the ways by which the suicide bombers were recruited, prepared and dispatched to their planned death, as well as how they felt and behaved along this road. This information was supplemented by data derived from interviews with the families of suicide bombers who died carrying out their attacks. The psychological makeup of suicide terrorists is put into context in other chapters of the book so as to provide an inclusive understanding of this phenomenon which takes into account public atmosphere and the ways in which terrorist groups influence the suicide candidates. The book examines the characteristics of suicide terrorists in light of the most influential theories of suicide and offers a critical and innovative analysis of current explanations of suicide terrorism. *Assessment Interviewing for Treatment Planning* : , 1978
