Repairing and Extending Doors and Windows H.L. Simmons,1990-12-31 To spite a national trend toward renovation  
restoration and remodeling construction products producers and their associations are not universally eager to publish  
recommendations for repairing or extending existing materials There are two major reasons First there are several possible  
applications of most building materials and there is an even larger number of different problems that can occur after  
products are installed in a building Thus it is difficult to produce recommendations that cover every eventuality Second it is  
not always in a building construction product producer s best interest to publish data that will help building owners repair  
their product Producers whose income derives from selling new products do not necessarily applaud when their associations  
spend their money telling architects and building owners how to avoid buying their products Finally in the Building  
Renovation and Restoration Series we have a reference that recognizes that problems frequently occur with materials used in  
building projects In this book and in the other books in this series xv xvi Series Foreword Simmons goes beyond the  
promotional hyperbole found in most product literature and explains how to identify common problems He then offers  
informed inside recommendations on how to deal with each of the problems Each chapter covers certain materials or family  
of materials in a way that can be understood by building owners and managers as well as construction and design  
professionals      *Handbook of Construction Tolerances* David Kent Ballast,1994 How does an architect engineer or builder

and with the clearly explained rationale behind each check as well as the building code issues involved Detailed drawings
