Malaysia Airlines Flight 370 David Soucie, 2015-02-17 On March 8 2014 Malaysia Airlines Flight 370 loaded 239 people on board and took off for what should have been a six hour flight It never made it and it s still missing It s been a year since Malaysia Airlines Flight 370 vanished and there s still no sign of the aircraft its passengers or its crew nor confirmation of what happened or where the aircraft resides In this gripping investigation of the events that led to the plane s disappearance and why they could happen again CNN aviation analyst David Soucie exposes the flaws in the aviation industry shares what needs to be done so a plane doesn t go missing again and uses a Bayesian analysis model to reveal what most likely happened on board the plane that led to its downfall Comprehensive in scope personal and empathetic in voice Soucie draws on his thirty years of experience as an accident investigator working with the Federal Aviation Administration He allows you to put the wild speculation about the plane s disappearance aside and assess the facts through the eyes of an experienced accident investigator [Aircraft Accident Investigation Learning from Human and Organizational Factors](#) ASSOC. Congress. House. Committee on Public Works and Transportation. Subcommittee on Aviation, 1986 *Interavia* ,1988-07 **Enhanced Emergency Smoke Venting** Elliott L. Maylor, 1988 This study evaluated two concepts for modifying the air conditioning systems of large commercial airplanes to enhance the venting of smoke that may be continuously injected into the passenger cabin during inflight fire emergencies Data from past fire accidents and airplane tests provided a basis for creating four fire smoke scenarios and deriving five sets of equations to predict the smoke venting effectiveness of current airplanes and the proposed concepts Concept A would modify the air conditioning packs by adding high flow modes with dual outflow valves and Concept B would add ram air ventilation with an

added dump valve The estimated costs to incorporate Concept A or B in the U S fleet were about 381 million or 587 million respectively The effectiveness equations predicted that both concepts would provide only slightly significant smoke venting enhancement Furthermore the study showed that both concepts would have been negated by the reported crew actions and or fire damage in past fires It was concluded that current U S fleet airplanes will provide a majority of the passenger cabin free of smoke during inflight fires while the air conditioning systems are kept operating
