Krajewski, 2015-01-15 Reflecting the expertise and perspective of five leading mammalogists the fourth edition of

Mammalogy Adaptation Diversity Ecology significantly updates taxonomy includes a new chapter on mammalian molecular

phylogenetics and highlights several recently described species There are close to 5 500 species in the class Mammalia

including the blue whale the largest animal that has ever lived and the pygmy shrew which weighs little more than a penny

The functional diversity of mammals has allowed them to play critical roles in every ecosystem whether marine freshwater

alpine tundra forest or desert Many mammal species are critically endangered and present complex conservation and

management challenges This book touches on those challenges which are often precipitated by overharvesting and habitat

loss as well as emerging threats such as the impact of wind turbines and white nose syndrome on bats and chronic wasting

disease on deer Among the updates and additions to the fourth edition of Mammalogy are numerous new photos figures and

cladograms over 4 200 references as well as A completely new chapter on mammalian phylogeny and genomics Current

taxonomy including major changes to orders suborders and superfamilies of bats and rodents An explanation of the recent

inclusion of whales with terrestrial even toed ungulates Updates on mammalian structural functional adaptations and fossil

history recent advances in our understanding of phylogeny biogeography social behavior and ecology A discussion of two new

orders and thirteen newly recognized extant families Reflections on the implications of climate change for mammals

Thorough examinations of several recently described species including Durrell's vontsira *Salanoia durrelli* and the Laotian
