The Selectamatic system operates the three-point linkage.

The tractor's hydraulic pump output can also be utilized to power or operate implements having their own valve equipment. Furthermore, double-acting take-off valves can be mounted on the tractor which take oil from the pump before feeding to the Selectamatic control valve. In this way they take precedence over the Selectamatic system, immobilizing it while oil is being used from the double-acting valve(s).

When the three-point linkage is not in use, the link should be locked in the raised position using the lift latch.
