Layer Endre Nagy,2018-11-05 Basic Equations of Mass Transport Through a Membrane Layer Second Edition has been fully
 updated to deliver the latest research in the field This volume covers the essentials of compound separation product removal
 concentration and production in the chemical biochemical pharmaceutical and food industries It outlines the various
 membrane processes and their applications offering a detailed mathematical description of mass transport and defining basic
 mass transport and concentration distribution expressions Additionally this book discusses the process parameters and

application of the expressions developed for a variety of industrial applications Comprehensive explanations of convective diffusive mass transport are provided both with and without polarization layers that help predict and process performance and facilitate improvements to operation conditions and efficiency Basic Equations of Mass Transport Through a Membrane Layer is an ideal resource for engineers and technologists in the chemical biochemical and pharmaceutical industries as well as researchers professors and students in these areas at both an undergraduate and graduate level Cites and analyzes mass transport equations developed for different membrane processes Examines the effect of biochemical chemical reactions in the presence of convective and diffusive flows in plane and cylindrical spaces Defines the mass transfer rate for first and zero order reactions and analytical approaches are given for other order reactions in closed mathematical forms Analyzes the simultaneous convective and diffusive transports with same or different directions
