 An Advanced Inquiry Lab

### Background

Students frequently study mixtures of compounds, or physical mixtures, in which only macroscopic and physical properties are observed. A mixture is not chemically combined, so the components of the mixture may be separated by physical means. The separation of a mixture into its components (distillation, solvent extraction, or other means) is often referred to as separation. The purpose of this investigation is to study the physical properties of compounds in a mixture and separate the components of the mixture.

### Objectives

1. Identify the components of a mixture.
2. Identify the components of a mixture.
3. Identify the components of a mixture.
4. Identify the components of a mixture.

### Background

A mixture is a combination of two or more pure substances where the components retain their chemical and physical properties. Mixtures are often separated by physical means. The separation of a mixture into its components is often referred to as separation. The purpose of this investigation is to study the physical properties of compounds in a mixture and separate the components of the mixture. The purpose of this investigation is to study the physical properties of compounds in a mixture and separate the components of the mixture.

Students will study the various physical properties of individual compounds, such as solubility, boiling point, melting point, and density. They will also study the various physical properties of mixtures, such as boiling point, melting point, and density. They will also study the various physical properties of mixtures, such as boiling point, melting point, and density.
