

3. Consider the structures below.

- Draw the mirror image of each molecule (the first one is done for you.)
- Circle the structures that are not chiral and use a dotted line to show any internal symmetry planes. Label these structures **meso compound**.

4. Read the assigned sections in your text and do the assigned problems.

Exercises for Part B

- Sometimes a molecule with one or more chiral centers is drawn without giving enough information to determine if the chiral center/s are R or S. Mark each chiral center below with an *.

By convention, if there is not enough information given to assign R or S, we are to assume that the structure represents an even mixture of all stereochemical possibilities. For each structure above, draw all stereoisomers implied by the drawing. Circle those structures that imply a racemic mixture (**racemic mixture** = 1:1 mixture of exactly two enantiomers).
