

AFL: Evidence of a Chemical Change Assessment

Step 1

Upload the question you propose to test in this lab activity to the Evidence of a Chemical Change Assessment Dropbox. Be sure to identify the dependent and independent variables and include the control to be used. Once you have received feedback and approval from your teacher, proceed to step 2.

Question: How can we determine a chemical reaction is taking place if we mix various household substances?

Assessment: Adding vinegar ($C_2H_4O_2$) in baking soda ($NaHCO_3$) produces bubbles (CO_2 gas) which indicates a chemical reaction. Using this knowledge and a carefully designed procedure, one can visually assess a chemical reaction if we mix these substances together. One can also determine what properties there are to chemical reactions. Another way to judge reactivity is to mix these substances separately with other house hold substances. This would show that only certain 2 chemicals are chemically reactive.

Reaction: $C_2H_4O_2 + NaHCO_3 \rightarrow NaC_2H_3O_2 + CO_2 + H_2O$

Variables

Independent variable: quantity of baking soda and vinegar

Dependent variable: amount of CO_2 gas. (depend on how much baking soda and vinegar will be used)

Control

Condition 1: vinegar will be used as control if it is being added to baking soda.

Condition 2: baking soda will be used as control if it is being added to vinegar

Chemical Changes During Processing and Storage of Foods Delia B. Rodriguez-Amaya, Jaime Amaya-Farfan, 2020-11-25 Chemical Changes During Processing and Storage of Foods Implications for Food Quality and Human Health presents a comprehensive and updated discussion of the major chemical changes occurring in foods during processing and storage the mechanisms and influencing factors involved and their effects on food quality shelf life food safety and health Food components undergo chemical reactions and interactions that produce both positive and negative consequences This book brings together classical and recent knowledge to deliver a deeper understanding of this topic so that desirable alterations can be enhanced and undesirable changes avoided or reduced Chemical Changes During Processing and Storage of Foods provides researchers in the fields of food science nutrition public health medical sciences food security biochemistry pharmacy chemistry chemical engineering and agronomy with a strong knowledge to support their endeavors to improve the food we consume It will also benefit undergraduate and graduate students working on a variety of disciplines in food chemistry Offers a comprehensive overview of the major chemical changes that occur in foods at the molecular level and discusses the positive and negative effects on food quality and human health Describes the mechanisms of these chemical changes and the factors that impede or accelerate their occurrence Helps to solve daily industry problems such as loss of color and nutritional quality alteration of texture flavor deterioration or development of off flavor loss of nutrients and bioactive compounds or lowering of their bioefficacy and possible formation of toxic compounds

Chemical Alternatives Assessments R M Harrison, R E Hester, 2013-04-30 Chemicals are an essential part of everyday life and all too often taken for granted yet often portrayed negatively in the media Concern over the deleterious effects of chemicals to the environment and human health have prompted governments in the developed world to establish screening programmes such as REACH and HPV Challenge to identify chemicals presenting the greatest degree of risk to health and the environment While such programmes identify chemicals with the greatest risk there is no ranking system for alternative chemicals which while being potentially less harmful still carry a degree of risk This volume of the Issues in Environmental Science and Technology series investigates how the alternatives can be assessed and their risk determined With contributions from experts across the globe this volume addresses some of the key concepts behind risk assessment of alternative chemicals Some of the current protocols adopted are discussed and several chapters explore the topic in the context of industry making this book essential reading for industrialists as well as academics postgraduate

Chemical Changes in Food during Processing Thomas Richardson,John W. Finley,1986-03-31 This volume results from the Eighth Basic Symposium held by the Institute of Food Technologists in Anaheim California on June 8 9 1984 The theme of the symposium was Chemical Changes in Food during Processing The speakers included a mix of individuals from academic institutions governmental agencies and the food industry Twenty speakers discussed topics ranging from the basic chemistry relating to food constituents to the more applied aspects of chemical changes in food components during food processing It was the intent of the organizers to bring together a group of speakers who could address the chemistry of changes in food components during processing from a mechanistic point of view As a consequence the proceedings of this symposium emphasize the basic chemistry of changes in food constituents from a generic perspective which is intended to provide the reader with a background to address more specific problems that may arise

Risk Assessment Methods for Biological and Chemical Hazards in Food Fernando Pérez-Rodríguez,2020-10-28 Risk assessment has been extensively developed in several scientific fields such as environmental science economics and civil engineering among others In the aftermath of the SPS and GATT agreements on the use of risk analysis framework in food trade signed in the 1990s international organisations and governments adopted risk assessment as a science based process to ensure food safety along the food chain The food industry can also benefit from the use of this approach for food process optimisation and quality assurance Risk Assessment Methods for Biological and Chemical Hazards in Food introduces the reader to quantitative risk assessment methods encompassing general concepts to specific applications to biological and chemical hazards in foods In the first section the book presents food risk assessment as methodology and addresses more specifically new trends and approaches such as the development of risk rating methods risk metrics risk benefit assessment studies and quality assessment methods Section II is dedicated to biological hazards This section identifies the most relevant biological hazards along the food chain and provides an overview on the types of predictive microbiology models used to describe the microbial response along the food chain Chapter 12 specifically deals with cross contamination and the quantitative methods that can be applied to describe this relevant microbial process The development and application of dose response models i e mathematical function describing the relationship between pathogen dose and health response are also covered in this section In Section III the book translates risk assessment concepts into the area of chemical hazards defining the process steps to determine chemical risk and describing the uncertainty and variability sources associated with chemicals Key Features Presents new trends and approaches in the field of risk assessment in foods Risk assessment concepts are illustrated by practical examples in the food sector Discusses how quantitative information and models are integrated in a quantitative risk assessment framework Provides examples of applications of quantitative chemical risk assessment in risk management The book written by renowned experts in their field is a comprehensive collection of quantitative methods and

approaches applied to risk assessment in foods It can be used as an extensive guide for food safety practitioners and researchers to perform quantitative risk assessment in foods

Uncovering Student Ideas in Science: 25 new formative assessment probes Page Keeley, Joyce Tugel, 2009 Wouldn't it be helpful to know what your students' ideas are about a science concept before launching into a new lesson or unit Uncovering Student Ideas in Science Volume 4 offers 25 more formative assessment probes to help reveal students' preconceptions of fundamental concepts in science bringing the total to 100 probes for the popular series by author Page Keeley Teachers of grades K-12 will find short probes with grade band specifics that provide easy-to-follow suggestions for addressing students' ideas by promoting learning through conceptual change instruction Volume 4 adds to the probes in physical life and Earth and space science with a new category called unifying principles Also covered is a discussion on balancing formative assessment with summative assessment

Constructing Science in Elementary Classrooms Norman G. Lederman, Judith S. Lederman, Randy L. Bell, 2004 Solidly based on the National Science Education Standards and Benchmarks for Science Literacy this new elementary science methods text immerses students into the context of classroom instruction through the authors' unique approach using The Teaching Cycle The text is divided into three major sections or clusters of chapters Goals of Science Instruction Setting the Stage and The Teaching Cycle The first two sections provide the theoretical and practical foundations for instruction while the third section provides content Section I presents an overall view of science as a way of knowing and eventually develops an argument for why science should be included in the curriculum at all Section II emphasizes the importance of connecting lessons and avoiding the tendency to present individual science lessons in isolation The major content chapters comprising Section III The Teaching Cycle Life Environmental Science Physical Science Earth and Space Science each incorporate the traditional topics of methods courses e.g. demonstrations laboratories classroom management assessment developmental psychology etc concepts and themes common to national reforms

Mire-Sluis, 2005 With the latest advances in analytical technologies most biological products can now be extensively characterized in terms of their identity heterogeneity and impurity profile The currently available analytical methods both physicochemical and biological can characterize the primary secondary and to some extent the higher order structure of proteins The sensitivity and selectivity of these methods allow for the identification and characterization not only of the desired protein component but also many product related substances and impurities as well as process related impurities

present in the drug preparations Using an appropriate selection of analytical tools it may be possible to demonstrate physicochemical and functional comparability between protein products manufactured before and after a manufacturing change or during product development However the extent of demonstrable comparability depends on the tests used on the nature of the product and on the basic understanding of structure function relationships Assessment of immunogenicity is also a critical component of product characterization and is highly dependent on the types of assays used
