Sustainable Green Chemical Processes and their Allied Applications Inamuddin, Abdullah Asiri, 2020-05-30 Urbanization, industrialization and unethical agricultural practices have considerably negative effects on the environment, flora, fauna and the health and safety of humanity. Over the last decade, green chemistry research has focused on discovering and utilizing safer, more environmentally friendly processes to synthesize products like organic compounds, inorganic compounds, medicines, proteins, enzymes and food supplements. These green processes exist in other interdisciplinary fields of science and technology like chemistry, physics, biology and biotechnology. Still, the majority of processes in these fields use and generate toxic raw materials, resulting in techniques and byproducts which damage the environment. Green chemistry principles alternatively consider preventing waste generation altogether, the atom economy, using less toxic raw materials and solvents and opting for reducing environmentally damaging byproducts through energy efficiency. Green chemistry is therefore the most important field relating to the sustainable development of resources without harmfully impacting the environment. This book provides in depth research on the use of green chemistry principles for a number of applications. **A Laboratory Manual of Organic Chemistry** Dr.

Lassar-Cohn, Alexander Smith, 1895 **The Organic Chem Lab Survival Manual** James W. Zubrick, 2016-01-19 Written for the laboratory that accompanies the sophomore/junior level courses in Organic Chemistry, Zubrick provides students with a valuable guide to the basic techniques of the Organic Chemistry lab. The book will help students understand and practice good lab safety. It will also help students become familiar with basic instrumentation techniques and apparatus and help them master the latest techniques such as interpretation of infrared spectroscopy. The guide is mostly macroscale in its orientation.
