significantly extended since the last volume of Methods in Cell Biology on this topic volume 47 1995 Edited by Stephen M King and Gregory J Pazour the newest installment of this highly acclaimed serial will serve as an essential addition to the study of cilia and flagella Covers protocols for cilia and flagella across systems and species Both classic and state of the art methods readily adaptable across model systems and designed to last the test of time Relevant to clinicians interested in respiratory disease male infertility and other syndromes who need to learn biochemical molecular and genetic approaches to studying cilia flagella and related structures

Cilia: Model Organisms and Intraflagellar Transport ,2009-12-01 Cilia are highly conserved organelles that serve motile functions sensory functions or both These organelles power cell movement generate fluid flow in various organs act as sensors of the extracellular environment and have been modified for various specialized tasks such as light reception and smell Defects in these ubiquitous organelles lead to a broad array of human genetic disorders that range from polycystic kidney disease retinal degeneration epilepsy and infertility to developmental defects such as situs inversus and polydactyly This volume is the third in a three part series on cilia that focuses on the use of model organisms to gain insight into ciliary function and on the process of intraflagellar transport that is essential for the assembly and maintenance of ciliary structures Includes both classic and state of the art methods readily adaptable across model systems and designed to last the test of time Covers forward and reverse genetic analysis of IFT and biochemical methods to define the role of IFT components Methods presented cover molecular genetic and biochemical approaches to ciliary function in model organisms

Optical Methods in Drug Discovery and Development Mostafa Analoui,David A. Dunn,2005 Proceedings of SPIE offer access to the latest innovations in research and technology and are among the most cited references in patent literature

Laser Manipulation of Cells and Tissues Michael W. Berns,Karl Otto Greulich,2007-06-20 The use of laser based manipulation tools has literally exploded on the cell biology and molecular pathology scene resulting in as many different laser micromanipulation systems as there are people using them Laser Manipulation of Cells and Tissues ties all these systems and studies together describing all of the different kinds of research and practical analytical applications of laser manipulation It also provides the reader with the basic information needed to actually build one s own laser micro manipulation system The combination of imaging and molecular probe technology with laser micromanipulation greatly extends the use of this technology in molecular cellular developmental and patho biology medicine This book should be valuable to scientists clinicians and students in the fields of cell and developmental biology cell physiology cancer biology pathology and stem cell biology Devotes four chapters to laser catapulting and capture of DNA and other cellular material for biochemical analysis a major use of this technology that has been adapted for molecular pathology both in clinical medicine and research Discusses the theory of laser tweezers optical tweezers and its application to novel problems in biology Covers topics on optoporation getting things into cells uncaging of molecules and the ability to collect and analyze nanomolar amounts of cell material by an array of biochemical physical tools of particular interest to cell
