

ACTIVITY 2: CONSCIOUS COMMUTING

As you ride to Six Flags Great Adventure, be conscious of some of the PHYSICS on the way.

A. STARTING UP

THINGS TO MEASURE:

As the bus pulls away from a toll booth, record the time it takes to go from rest to 15 miles per hour.

You will have to put someone up front to help.

$t =$ _____ seconds

THINGS TO CALCULATE: SHOW ALL EQUATIONS AND SUBSTITUTIONS

1. Convert 15 miles per hour to meters per second.

$v_i =$ 0 m/s

$v_f =$ _____ m/s

2. Acceleration means how much the speed changes each second. Find the acceleration of the bus. Indicate units.

$a =$ _____

3. Using your mass in kilograms and Newton's Second Law, ($F = ma$), find the forward force on you (in newtons) as the bus accelerates from rest.

$F =$ _____

4. Compare this force to the force gravity exerts on you (your weight).

Physics, 199? *Neuroscience, Consciousness and Spirituality* Harald Walach, Stefan Schmidt, Wayne B.

Jonas, 2011-08-31 *Neuroscience Consciousness and Spirituality* presents a variety of perspectives by leading thinkers on contemporary research into the brain the mind and the spirit This volumes aims at combining knowledge from neuroscience with approaches from the experiential perspective of the first person singular in order to arrive at an integrated understanding of consciousness Individual chapters discuss new areas of research such as near death studies and neuroscience research into spiritual experiences and report on significant new theoretical advances From Harald Walach s introductory essay *Neuroscience Consciousness Spirituality Questions Problems and Potential Solutions* to the concluding chapter by Robert K C Foreman entitled *An Emerging New Model for Consciousness The Consciousness Field Model* this book represents a milestone in the progress towards an integrated understanding of spirituality neuroscience and consciousness It is the first in a series of books that are dedicated to this topic [Quantum Information and Consciousness](#)

Danko D. Georgiev, 2017-12-06 I loved the book This book is not just interesting it is exciting I have probably read every significant book in the field and this is the strongest and most convincing one yet It is also one of the most comprehensive in its explanations I shall most certainly recommend the book to colleagues Richard G Petty MD a very good introduction to the basic theory of quantum systems Dr Georgiev s book aptly prepares the reader to confront whatever might be in store later from the Foreword by Prof James F Glazebrook Eastern Illinois University This book addresses the fascinating cross disciplinary field of quantum information theory applied to the study of brain function It offers a self study guide to probe the problems of consciousness including a concise but rigorous introduction to classical and quantum information theory theoretical neuroscience and philosophy of the mind It aims to address long standing problems related to consciousness within the framework of modern theoretical physics in a comprehensible manner that elucidates the nature of the mind body relationship The reader also gains an overview of methods for constructing and testing quantum informational theories of consciousness

Explaining Consciousness Jonathan Shear, 1999-01-22 Why doesn t all this cognitive processing go on in the dark without any consciousness at all In this book philosophers physicists psychologists neurophysiologists computer scientists and others address this central topic in the growing discipline of consciousness studies At the 1994 landmark conference *Toward a Scientific Basis for Consciousness* philosopher David Chalmers distinguished between the easy problems and the hard problem of consciousness research According to Chalmers the easy problems are to explain cognitive functions such as discrimination integration and the control of behavior the hard problem is to explain why these functions should be associated with phenomenal experience Why doesn t all this cognitive processing go on in the dark without any consciousness at all In this book philosophers physicists psychologists neurophysiologists computer scientists and others address this central topic in the growing discipline of consciousness studies Some take issue with Chalmers distinction

arguing that the hard problem is a non problem or that the explanatory gap is too wide to be bridged Others offer alternative suggestions as to how the problem might be solved whether through cognitive science fundamental physics empirical phenomenology or with theories that take consciousness as irreducible Contributors Bernard J Baars Douglas J Bilodeau David Chalmers Patricia S Churchland Thomas Clark C J S Clarke Francis Crick Daniel C Dennett Stuart Hameroff Valerie Hardcastle David Hodgson Piet Hut Christof Koch Benjamin Libet E J Lowe Bruce MacLennan Colin McGinn Eugene Mills Kieron OHara Roger Penrose Mark C Price William S Robinson Gregg Rosenberg Tom Scott William Seager Jonathan Shear Roger N Shepard Henry Stapp Francisco J Varela Max Velmans Richard Warner

Quanta and Mind J. Acacio de Barros, Carlos Montemayor, 2019-09-19 This edited volume examines aspects of the mind consciousness that are relevant to the interpretations of quantum mechanics In it an international group of contributors focus on the possible connections between quantum mechanics and consciousness They look at how consciousness can help us with quantum mechanics as well as how quantum mechanics can contribute to our understanding of consciousness For example what do different interpretations aimed at solving the measurement problem in quantum mechanics tell us about the nature of consciousness such as von Neumann s interpretation Each interpretation has associated to it a corresponding metaphysical framework that helps us think about possible models of consciousness Alternatively what does the nature of consciousness tell us about the role of the observer and time reversibility in the measurement process The book features 20 papers on contemporary approaches to quanta and mind It brings together the work of scholars from different disciplines with diverse views on the connections between quanta and mind ranging from those who are supportive of a link between consciousness and quantum physics to those who are very skeptical of such link Coverage includes such topics as free will in a quantum world contextuality and causality mind and matter interaction quantum panpsychism the quantum and quantum like brain and the role of time in brain mind dynamics

Problems in Quantum Physics, Gdańsk '87 Ludwik Kostro, 1988 English Mechanic and Mirror of Science, 1903 English Mechanic and World of Science, 1903 *Open Quantum Systems in Biology, Cognitive and Social Sciences* Andrei Y. Khrennikov, 2023-06-03 This book mathematically analyzes the basic problems of biology decision making and psychology within the framework of the theory of open quantum systems In recent years there has been an explosion of interest in applications of quantum theory in fields beyond physics The main areas include psychology decision making economics finance social science as well as genetics and molecular biology The corresponding models are referred to as quantum like they don t concern any genuine physical processes in the human brain Quantum like models reflect the special features of information processing in biological cognitive and social systems which

match well with the quantum formalism This formalism gives rise to the quantum probability model QP which differs essentially from Kolmogorov's classical probability model QP also serves as the basis for quantum information theory Recently QP has been widely applied to the resolution of the basic paradoxes of decision making theory and to modeling experimental data stemming from cognition psychology economics and finance thereby shedding light on probability fallacies and irrational behavior In this book the theory of quantum instruments and the quantum master equation are applied to the modeling of biological and cognitive processes in particular to the stability of complex biological and social systems interacting with their environment An essential part of the book is devoted to the theory of the social laser and the Fr hlich condensate
