

Chapter 3

Chemical Reactions

3.1 – Introduction to Chemical Equations

Define each term...

- a. **reactant** - The substances combined in the reaction.
- b. **product** - The substance produced.
- c. **aqueous** - A substance dissolved in water.
- d. **coefficient** - The multiplying numbers assigned to the species in a chemical reaction.
- e. **stoichiometry** - The study of the quantitative relations between amounts of reactants and products.

The Law of Conservation of Matter states... that matter can neither be created nor destroyed.

3.2 - Balancing Chemical Equations

A balanced chemical equation is one in which... the same number of atoms of each elements appears on each side of the equation.

Guidelines for balancing an equation:

1. Write the correct formulas for all reactants and products.
2. Find an element that appears in only one place on each side of the equation. Often that means saving oxygen for last.
3. Count the number of atoms of that element that appear on each side.
4. Adjust coefficients in front of formulas to get the same number of atoms on each side.
5. You CANNOT change the subscripts in the formulas of compounds.
6. Repeat for all elements.
7. Balance using the simplest whole number coefficients possible.
