Next year, the State of North Carolina will fully implement the Common Core State Standards (CCSS) in Language Arts and Math, along with 45 other states. There are two main benefits to this.

First, states will begin to standardize curricula and content in these areas, which makes K-12 education common throughout the country. In a nation where people are becoming increasingly mobile as well as increasingly global, common standards give all teachers, students, and parents common goals to reach for each content area and grade level.

Second, the CCSS are designed to prepare students to be proficient in real-world skills of the 21st century. The overarching mission of the CCSS is to prepare students, and therefore communities, to be globally

competitive in the world market of ideas and knowledge.

Charlotte-Mecklenburg Schools is making great strides in fitting course offerings, curricula, and teaching best practices with the

CCSS to make our district the most efficient and productive in the state.

Community House Middle School is at the forefront of progress in aligning standards, curriculum, and teaching practices. With literacy at the core of every curriculum—and with appropriate rigor and real-life application—CHMS is leading the district in preparations and successful benchmarks for this

exciting change.

A major change to come with the new implementation is the format of the new end-of-grade and end-of-course assessments. You can read more about these assessments by following the link on page 4.

The CCSS implementation is a fantastic opportunity to make positive and meaningful strides toward the success of all students as they move toward high school and beyond.

This document is a general statement of how our current program of learning mathematics leads to success against the CCSS and the assessments that will evaluate student progress and proficiency in those standards. It will also point out many ways that the CCSS and Connected Math are the perfect recipe for success.

## Math Practice 1: Make sense of problems and persevere in solving them.

Students who are proficient in math are able to approach problems by explaining them and finding the important points that lead to the solution. This includes understanding what the question is, what the important facts are (as well as what facts are not important), organizing a strategic plan, verifying that the plan works, and then evaluating

the solution. An important part of evaluating the solution is asking the question, "Does this make sense?"

Proficient students can see the connections between text, equations, graphs, and tables. They can easily transfer information from one to the other and see changes within them

that make sense of the process of solving the problem.

Finally, as students work, they constantly evaluate their progress toward the solution and make changes as needed in order to reach a logical conclusion.

Mathematical Challenges For All Roza Leikin,2023-03-17 This book argues that mathematical challenge can be found at any level and at every age and constitutes an essential characteristic of any mathematics classroom aimed at developing the students mathematical knowledge and skills Since each mathematics classroom is heterogeneous with respect to students mathematical potential quality mathematical instruction results from matching the level of mathematical challenge to different students potential Thus effective integration of mathematical challenge in the instructional process is strongly connected to the equity principle of mathematics education In the three sections in this volume readers can find diverse views on mathematical challenges in curriculum and instructional design kinds and variation of mathematically challenging tasks and collections of mathematical problems Evidence based analysis is interwoven with theoretical positions expressed by the authors of the chapters Cognitive social and affective characteristics of challenging mathematical activities are observed and analyzed The volume opens new avenues of research in mathematics education and pose multiple questions about mathematical instruction rich in mathematical challenge for all The authors invite readers to explore and enjoy mathematical challenges at different levels

Lessons Learned from Research on Mathematics Curriculum Denisse R Thompson,Mary Ann Huntley,Christine Suurtamm,2024-09-01 This volume focuses on research related to mathematics curriculum But rather than focusing on results of research it focuses on lessons learned about conducting research on curriculum whether about design and development analysis of curriculum in the form of official standards or textbook instantiations teacher intentions related to curriculum implementation or actual classroom enactment For scholars interested in curriculum research the volume offers lessons about conducting curriculum research that have been learned by others engaged in such work including frameworks tools and techniques as well as challenges and
