Design Energy Simulation for Architects Kjell Anderson, 2014-01-23 Leading architectural firms are now using in house design simulation to help make more sustainable design decisions Taking advantage of these new tools requires understanding of what can be done with simulation how to do it and how to interpret the results This software agnostic book which is intended for you to use as a professional architect shows you how to reduce the energy use of all buildings using simulation for shading daylighting airflow and energy modeling Written by a practicing architect who specializes in design simulation the book includes 30 case studies of net zero buildings as well as of projects with less lofty goals to demonstrate how energy simulation has helped designers make early decisions Within each case study author Kjell Anderson mentions the software used how the simulation was set up and how the project team used the simulation to make design decisions Chapters and case studies are written so that you learn general concepts without being tied to particular software Each chapter builds on the theory from previous chapters includes a summary of concept level hand calculations if applicable and gives comprehensive explanations with graphic examples Additional topics include simulation basics comfort climate analysis a discussion on how simulation is integrated into some firms and an overview of some popular design simulation software

SU+RE, 2018-02-14 In the 21st century architects and engineers are being challenged to produce work that is concurrently sustainable and resilient Buildings need to mitigate their impact on climate change by minimising their carbon footprint while also countering the challenging new weather conditions Globally severe storms extreme droughts and rising sea levels are becoming an increasingly reoccurring feature To respond a design process is required that seeks to integrate resiliency by building in the capacity to absorb the impacts of these disruptive events and adapt over time to further changes while simultaneously being part of the solution to the problem itself This issue of AD is guest edited by the interdisciplinary team at Stevens Institute of Technology who developed the winning entry for the 2015 US Department of Energy Solar Decathlon competition the SU RE House While particular focus is paid to this student designed and built prototype home the publication also provides a broader discussion of the value of design build as a model for tackling the issue of integrating sustainability and resilience and what changes are required across education policy practice and industry for widespread implementation Contributors include Bronwyn Barry Michael Bruno Alex Carpenter Adam Cohen Ann Holtzman Ken Levenson Brady Peters Terri Peters Karin Stieldorf Alex Washburn Claire Weisz and Graham Wright Featured architects 3XN GXN FXFOWLE Architects Local Office Landscape Architecture LOLA Lateral Office Skidmore Owings Merrill SOM Snohetta Structures Design Build and WXY Studio
