

This publication describes all steps to arrive at a cycle-friendly infrastructure, from the policy proposal to promote cycling to the physical implementation of measures. Cycle infrastructure is taken to mean all technical facilities intended for cyclists.

Traffic handbooks provide guidelines for designing cycle infrastructure. Which is useful, but they also have the following drawbacks:

- They provide examples and/or templates which encourage their use without reflection.
- They strive towards integration with requirements set by other modes of transport, which results in compromises being made at an early stage.

In order to avoid these drawbacks, the present publication aims to encourage designers to heed the following recommendations during every assignment and at each stage of the process:

- Put yourself in the shoes of the cyclist as future user of the design, also taking into account vulnerable groups of cyclists, such as children and the elderly.
- Ensure that facilities fulfil the policy objectives so that they support the policy.
- Devote attention to the (spatial planning) integration of cycle facilities in the surrounding area.
- See to it that the function, design and use of infrastructure are in equilibrium.
