The Builder ,1908 Staircases - Structural Analysis and Design M.Y.H. Bangash,T. Bangash,1999-01-01 In recent years both free standing and geometric staircases have become quite popular Many variations exist such as spiral helical and elliptical staircases and combinations of these A number of researchers have come forward with different concepts in the fields of analytical and numerical design and of experimental methods and assessments The aim of this book is to cover all these methods and to present them with greater simplicity to practising engineers Staircases is divided into five chapters Specifications and basic data on staircases Structural analysis of staircases Classical methods Structural analysis of staircases Modern methods Staircases and their analysis A comparative study Design analysis and structural detailing Charts and graphs are included and numerous design examples are given of freestanding and other geometric staircases and of their elements and components These examples are related to the case studies which were based on staircases that have already been constructed All examples are checked using various Eurocodes The book includes bibliographical references and is supported by two appendices which will be of particular interest to those practising engineers who wish to make a comparative study of the different practices and code requirements used by various countries detailed drawings are included from the USA Britain Europe and Asia Staircases will serve as a useful text for teachers preparing design syllabi for undergraduate and post graduate courses Each major section contains a full explanation which allows the book to be used by students and practising engineers particularly those facing the formidable task of having to design detail complicated staircases with unusual boundary conditions Contractors will also find this book useful in the preparation of construction drawings and manufacturers will be interested in the guidance given in the text Techniques of Staircase Construction W. Mannes,2012-12-06 Staircases which today are equally the responsibility of joiners The increasing demand for textbooks on the techniques of stair and carpenters have had a varied history over the last thirty construction is due to two main factors years Until 1945 nearly all staircases even those in large resi dential blocks were made of wood Because of the amount of 1 The relatively small dwellings that were built twenty to thirty destruction that took place during the war new building regu

years ago are no longer regarded as acceptable. New regulations frequently stipulated nonflammable materials for almost all stairs. Government aid available to finance such projects has in addition stimulated the rebuilding and thus the design of more what is more, fewer and fewer craftsmen were trained for this generously proportioned dwellings including of course rewarding and varied branch of woodworking craftsmanship staircases. This is a regrettable development since good stair builders must combine the design capabilities and three dimensional approach. The style of living has changed. The time when sober intent of the carpenter with the exact and neat craftsmanship of the joiners were the order of the day has gone. Excessive nostalgic *er* Techniques of Staircase Construction therefore provides welcome reversal to previous styles has also passed. *Techniques of Staircase Construction* Willibald Mannes, 1979. *Staircases* Karl J. Habermann, 2003. Despite the ever widening range of ready made components on the market an expertly made staircase aptly fitting the building is still a hallmark of good architecture and reveals much about an architect's approach to design, construction and materials. This volume reviews the current state of technology in stair construction providing a comprehensive overview of the latest production methods useful for the day to day work. Following an introductory essay on the development of staircases the fundamental principles in building stairs are documented and essential information is provided on the crucial elements of construction and the creative possibilities of the basic materials wood, steel and concrete. The theory is illustrated by a large number of extensively documented international examples providing an invaluable source of inspiration for builders and architects. As a practical aid the book contains a subject index, glossary and information on current regulations and norms.

Temporary Steel Staircase Design Berny Ng (University of Manitoba Student), Alan Lau (University of Manitoba Student), 1981. **The Staircase** John Templer, 1995-03. The first theoretical, historical and scientific analysis of one of the most basic and universal building elements, the stair. **The Staircase Design** William Edwin Pruitt, 1956. The Staircase John Templer, 1992. John Templer has written the first theoretical, historical and scientific analysis of one of the most basic and universal building elements, the stair. Together these two volumes present a detailed study of stairs and ramps, the art and science of their design, their history and their hazards. For the designer and the art and architectural historian, the first volume treats the fascinating history of stairs and their immense influence on the art and science of architecture. It is illustrated with more than 100 photographs from around the world and reviews the literature on stairs as well as ladders and railings and ramps from Vitruvius to Venturi. Templer considers the whole play of meanings in the idea of the stair as art, object, as structural idea, as legal prescription or as poetic fancy, making it clear that the stair is simultaneously an aesthetic, architectonic, ergonomic and cultural element. The second volume shows the dangers stairs present. Drawing on twenty years of human factors research on stairs, Templer sets out what is known about slips, trips and falls and how best to design stairs to avoid their inherent dangers. He discusses the physiological and behavioral relationship between humans and stairs and

walkways the question of gait and slippery surfaces and the various types of falls and the injuries that result Perhaps most importantly Templer proposes the idea of the soft stair which could substantially reduce the annual epidemic of stair related deaths and injuries John Templer is Regents Professor of Architecture at the Georgia Institute of Technology He has published extensively on architecture including theory human factors research and designing for the elderly and disabled and is also an expert on legal cases involving bodily injury caused by falls

Object Modeling and Proper Abstractions: The Case of Stair Design June-Hao Hou, 2006 For the purpose of this research stairs have been selected as the subject of study because of their historical significance systematic structure and because they exist in abundance in various forms Initially existing computer tools for stair generation were reviewed to gather tool constraints Then a new way of thinking regarding stair design is proposed as well as a properly defined abstraction of stairs This abstract model is capable of modeling wide variety of stairs including numerous special cases
