### SHOP NOTES

#### SERVICING ANTI-VIBRATION INSTRUMENT MOUNTINGS

Anti vibration mountings (LORD mounts) are used in many places to absorb engine vibration in the mounting of instruments, snap relays, tachometers, etc. When it becomes necessary to service a part secured by Lord Mounts, care should be exercised during removal and installation of the part to avoid twisting the rubber diaphragm of the mounts. At the same time, the part is removed from the engine for service, the

mounts should be inspected for wear and replaced, if necessary.

The attaching screw through the center of the mount must be held from turning during final tightening of the nut. If this screw rotates, it will pre-load the rubber diaphragm in tension and considerably shorten the life of the mount.

#### CHECK ENGINE STARTING SWITCH

If difficulty in starting motor engagement has been experienced in a vehicle which has been re-powered by a diesel engine, check to see if the key-type starting switch on the instrument panel has been retained.

Key-type starting switches are usually not capable of carrying the current required for heavy-duty diesel engine starter solenoids. The excessive voltage drop in the solenoid circuit restricts the solenoid pull and results in failure of the starter to engage and crank. When such situation occurs and the switch is turned off and on several times, breaking of the solenoid current causes burning or welding of the switch contacts.

contacts.

Install a part in the type starting switch which is capable of making, breaking and carrying the solenoid current without damage to the contact points. Refer to Afton Switch at Section 7.4b. Otherwise, a heavy-duty magnetic switch should be used in the solenoid control circuit in addition to the key-type switch. The magnetic switch must be capable of making and breaking at least 90 amperes in a 12-volt system; the key switch would then carry no more than one ampere, which is sufficient to operate the magnetic switch.

#### ALIGNMENT TOOLS FOR TACHOMETER DRIVE COVERS AND ADAPTORS

Whenever a tachometer drive cover assembly or a tachometer drive adaptor is installed on an engine, it is important that the cover assembly or adaptor be aligned properly with the tachometer drive shaft.

Misalignment of a tachometer drive shaft can impose a side load on a tachometer drive cable adaptor resulting in possible gear seizure and damage to other related components.

To establish proper alignment, use one of the three tools in set J 23008. Because of the many different combinations of tachometer drive shafts, covers and adaptors, it is not practical to illustrate specific usages for each tool. When confronted with an alignment job, test fit each tool to determine which provides the best fit and proceed to make the alignment with that tool as shown in Fig. 1.

Correct alignment is established when there is no tachometer drive shaft bind on the inside diameter of the tool when the complete band rotation of the engine is made.
