disease characterized by a dense fibrotic stroma and an immunosuppressive tumor microenvironment Until recently there
were no predictive biomarkers to personalize selection of targeted or biologic therapies as a part of standard of care
treatment Moreover the regulatory immune population of cells creates a cold non immunogenic tumor that is resistant to
immunotherapies including checkpoint inhibitors However in the last few years there has been substantial progress in our
understanding of the role mutations in the pathogenesis of disease leading to increased adoption of germline and next
generation sequencing to identify mutations and fusions to optimize selection of therapies and select patients for clinical
trials of targeted agents This book provides a comprehensive global overview on therapy for pancreatic cancer exploring
approved therapies and focusing on the Next in drug development including molecularly targeted therapy and efforts at
Drugging the Undruggable the KRAS mutation It also addresses efforts at targeting the inhospitable stroma to improve drug
delivery to the tumor cells incorporating ct DNA liquid biopsies in the care of patients and recent advances in
immunotherapy Pancreatic Cancer Current Therapeutics and Future Directions will illuminate these challenges review
existing therapeutics and highlight current and future efforts to improve outcomes in this devastating disease Useful to
physicians fellows medical students residents physician assistants nurse practitioners pharmaceutical companies and
