HEALTHY LIFESTYLE BEHAVIORS; DIABETES SELF-MANAGEMENT EDUCATION AND SUPPORT (DSMES); SOCIAL DETERMINANTS OF HEALTH (SDOH)

* In people with HF, CKD, established CVD or multiple risk factors for CVD, the decision to use a GLP-1 RA or SGLT2 with proven benefit should be independent of background use of metformin. A strong recommendation is warranted for people with CVD and a weaker recommendation for those with indicators of high CV risk. However, a higher absolute risk reduction and thus lower numbers needed to treat are seen at higher levels of baseline risk and should be factored into the shared decision-making process. (See text for details). * Low-dose TZD may be better tolerated and similarly effective. † For SGLT2, CV benefit outcomes trials demonstrate their efficacy in reducing the risk of composite MACE, CV death, all-cause mortality, HF, and renal outcomes in individuals with T2D with established high risk of CVD. For GLP-1 RA, CVDs demonstrate their efficacy in reducing composite MACE, CV death, all-cause mortality, MI, stroke, and renal outcomes in individuals with T2D with established high risk of CVD.

Identify barriers to goals:

- Consider DSMES referral to support self-efficacy in achievement of goals
- Consider technology (e.g., diagnostic CGM) to identify therapeutic gaps and tailor therapy
- Identify and address SDOH that impact achievement of goals
