ABSTRACT

Induction motor characteristics became complex to study, after the invention of drives where the motor incorporated with power electronic switches such as thyristor, diodes, GTO, and MOSFET. Induction motor characteristics can be studied and modelled with software such as Finite Element Analysis and Laboratory Virtual Instrument Engineering Workbench. Finite Element Analysis is used to study and model the motor might be complex and the time taken to compute was unreliable. In this paper induction motor was modelled with the help of LabVIEW software this allows us to model and simulate the motor in order to analyse the performance. The induction motor modelled here was based on the mathematical equations.

1. INTRODUCTION

Induction motor designing based on the equation is bit complex, because equation whose terms are not of the first degree and more over it is a strongly coupled system. The input and output variable relationship is almost complex thus simulation of induction motor physically is hard. Most commonly employed software are PSpice, Finite Element Analysis, Matrix Laboratory and Laboratory Virtual Instrument Engineering Workbench other software rather than is, are created based on the text lines. LabVIEW software is based on the graphical programming environment. LabVIEW software has a dynamic nature which contributes to this dynamic tracking of processing the data. The changes in this data can be observed continuously. Dynamic analyzing is established based on both the mathematical and physical model. Normally equivalent circuit of induction motor resembles the equivalent circuit of transformer where the airgap between the stator and rotor in the induction motor differentiate from the transformer. LabVIEW software of following qualities such as multi-dimensional plots, xy graphs, report generation in excel, word makes this software accessible and has a unique feature, which simplifies the simulation process [1].

The dynamic and steady state analysis of induction motor are difficult to compute so modelling a motor using mathematical model helps to eliminate the further consequences. So the determination of parameters must be accurate for carrying out multiple analysis. Machine performance changes as the coupled system inertia changes it also contributes to the change in the load torque. Motor constancy changes if the motor inertia and load torque of that motor changes. Identifying faults in electric motor using LabVIEW is growing research area where many researchers giving their valuable contribution to find out faults in motor. Electric motor comprises of numerous motor which are developed and improved day by day in that induction motor monitoring and faults diagnosis is a feature rich area because induction motor is the widely used motor which occupies nearly 75 % of drives in industries so only they're widely known as the work horse of an industry [2-3].
