FLYING TIPS

- When launching the drone, face the same direction as the drone. Green LEDs and green LEDS should be in front.
- If your drone drifts in any direction when you are hovering, you will need to make trim adjustments to correct the drifting. Trim adjustments are sometimes needed when the drone is first flown after purchase. (See TRIM ADJUSTMENTS section for details).
- Practice launching, hovering and landing before attempting to learn other moves.
- Flying 2 to 3 feet above the ground will reduce ground turbulence and make flying easier.
- When first attempting to fly in different directions, start by tapping the direction stick until you have a feel for it. Always move controls slowly until you become comfortable operating the drone.
- Once you've mastered flying in directions, practice rotational controls. Turning and keeping drone facing the same direction as you make flying easier and more intuitive.
- Stay 2 to 3 feet away from walls and ceilings as drone will be drawn towards them if you fly too close.
- If propeller blades come in contact with another object or you crash, throttle down or auto land immediately to prevent possible or further damage.
- If anything prevents drone's blades from spinning or if they become jammed, throttle down or auto land immediately. Do not attempt to fly until obstruction has been removed and damage fixed.
- Should something prevent drone's blades from spinning, drone may auto shutdown. Lipo battery will need to be unplugged then reconnected to restore flying power.
- If the drone flies too far away, beyond the control range of the remote, the drone will shutdown to prevent the drone from flying out of control.
