A 1.00-kg object A is connected with a string to a 1.00-kg object B, which is connected with a second string over a massless, frictionless pulley to a 4.60-kg object C. The first two objects are placed onto a frictionless inclined plane that makes an angle $\theta = 35.0^\circ$ as shown.

1) Calculate the acceleration of the masses. (Express your answer to three significant figures.)

2) Calculate the tension in the first string. (Express your answer to three significant figures.)

 N

3) Calculate the tension in the second string. (Express your answer to three significant figures.)

Generation Of Self-excited, Hidden And Non-self-excited Attractors In Piecewise Linear Systems: Some Recent Approaches Eric Campos Canton,Rodolfo De Jesus Escalante Gonzalez,Hector Eduardo Gilardi Velazquez,2023-06-15 What kind of dynamics is a piecewise linear system able to display How may they generate heteroclinic chaos How can the coexistence of attractors be designed and characterized Is it necessary to have equilibrium points to generate chaotic behavior Chaos theory and complex systems are interesting and evolving topics whose investigation from a theoretical and practical point of view constantly leads to arising questions Interesting behaviors can be observed in self excited attractors hidden attractors and non self excited attractors This book presents some fundamentals of linear system theory and recent approaches to design the three classes of chaotic attractors in piecewise linear systems Each chapter presents a brief description and basic concepts to provide an overview of linear systems theory chaos and multistability in integer linear systems hidden and non self excited attractors and fractional approaches They also provide example systems to illustrate the concepts and design methods introduced Some current topics under investigation are addressed from an integer order perspective to make the connection with the fractional order counterpart This textbook provides a comprehensive introduction methodologies and analysis tools to study chaotic piecewise linear systems and will be suitable for undergraduate or graduate students interested in the field of chaos and complex dynamics

Natural Hazards Mohammad Mokhtari,2023-07-19 In a world shaped by the forces of nature humankind has always sought to understand and mitigate the impacts of natural hazards Natural Hazards New Insights delves into the intricate realm of floods earthquakes tsunamis meteorological hazards mining related disasters and other major catastrophes that afflict our planet This book takes readers on a journey to gain a deeper understanding of these phenomena unearthing fresh insights into their causes impacts and strategies to mitigate their effects Organized into six comprehensive sections this book begins with a global perspective on natural hazards laying the foundation for understanding the diverse range of challenges they pose It then explores seismic hazards analyzing earthquake patterns urban damage assessment fault reactivation and more Shifting the focus to flooding as a natural hazard the book examines hydrological extremes flood mapping and risk reduction strategies It further explores climatological hazards including the intricate relationship between climate change and natural disasters remote sensing technologies and the impacts of climate change on agriculture Landslides are also scrutinized as significant natural hazards with chapters on polarization analysis landslide assessment hazard zonation and the impact of underground coal mining methods on slope stability Lastly the book addresses the social challenges that arise when disasters strike examining psychological reactions spontaneous volunteers urban planning responses and social vulnerability to earthquake hazards Through peer reviewed chapters this book offers valuable insights and expertise from renowned authors in the field Their contributions have shaped this comprehensive exploration which aims to navigate the challenges minimize risks and build a

Computational Science and Its Applications - ICCSA 2025 Workshops Osvaldo Gervasi, Beniamino Murgante, Chiara Garau, Yeliz Karaca, Maria Noelia Faginas Lago, Francesco Scorza, Ana Cristina Braga, 2025-07-05 The fourteen volume set LNCS 15886-15899 constitutes the papers of several workshops which were held in conjunction with the 25th International Conference on Computational Science and Its Applications ICCSA 2025 held in Istanbul Turkey during June 30-July 3 2025 The 362 full papers 37 short papers and 2 PhD showcase included in this book were carefully reviewed and selected from 1043 submissions In addition the conference consisted of 58 workshops focusing on very topical issues of importance to science technology and society from new mathematical approaches for solving complex computational systems to information and knowledge in the Internet of Things new statistical and optimization methods several Artificial Intelligence approaches sustainability issues smart cities and related technologies Calculating and Problem Solving Through Culinary Experimentation Hervé This vo Kientza, 2022-11-03 While many books proliferate elucidating the science behind the transformations during cooking none teach the concepts of physics chemistry through problem solving based on culinary experiments as this one by renowned chemist and one of the founders of molecular gastronomy Calculating and Problem Solving Through Culinary Experimentation offers an appealing approach to teaching experimental design and scientific calculations Given the fact that culinary phenomena need physics and chemistry to be interpreted there are strong and legitimate reasons for introducing molecular gastronomy in scientific curriculum As any scientific discipline molecular gastronomy is based on experiments to observe the phenomena to be studied and calculation to fit the many data obtained by quantitative characterization of the studied phenomena but also for making the theoretical work without which no real science is done including refuting consequences of the introduced theories Often no difficult calculations are needed and many physicists in particular make their first steps in understanding phenomena with very crude calculations Indeed they simply apply what they learned before moving to more difficult math In this book the students are invited first to make simple experiments in order to get a clear idea of the culinary phenomena that they will be invited to investigate and then are asked simple questions about the phenomena for which they have to transform their knowledge into skills using a clear strategy that is explained throughout Indeed this is problem solving based on experiments and all this about food and cooking Key Features Introduces readers to tips for experimental work Shows how simple scientific knowledge can be applied in understanding questions Provides a sound method strategy for calculation in physics and chemistry Presents important definitions and laws for physical chemistry Gives confidence in one's calculation skill and problem solving skills Explore physical and chemical phenomena that occur during cooking A unique mix of culinary arts and correct calculations this book
