

Earth Science
Chapter 19
Section 1

A. Days and Years:

The study of the moon, stars and other objects in space is called **Astronomy**.

Motions of the Earth:

Earth - Sun Relationships:

- The Earth intercepts only a minute percentage of the sun's energy - less than $1/20000000000$ (one two-billionth)
- Solar radiation represents 99.9% of the energy that heats the Earth
- Solar energy is not distributed equally over the Earth's land and sea surfaces
- This unequal heating drives the ocean's currents and creates winds that transport heat from the tropics to the poles in an attempt to reach an energy balance

Motions of the Earth:

The Earth travels around the sun in a path called an **orbit**.

The Earth has two principle motions in it's orbit:

1. **Rotation** = The spinning of the earth about its axis, (an imaginary line running through the poles) Our planet rotates once every 24 hours producing the daily cycle of daylight and darkness. (one day)
