Manual of Construction Project

Management Jüri Sutt, 2011-05-09 This construction client's manual is written in the form of a list of activities. It supports owners in the role of client by helping them make choices during the project development process. This increases control over cost, quality and duration at each stage. Activities within each main stage of the project development: preparation stage, procurement, design, preparation for construction, construction itself, handover, implementation, are divided into phases, each requiring separate decision making. The phase begins with a list of direct previous decisions and continues with a list of executors, the goal of the present phase and a list of activities to be performed. And each phase ends with a list of expected results and a list of activities that these results release for action in the next phase. The sequence of these seven stages can be altered to help building owners manage risk by choosing and combining the timing of these stages. The tasks involved in project preparation described in the first chapter are, for example, often left by the owner for the designers to solve or sometimes even the contractors. The decisions relating to the choice of procurement schemes described in the second chapter can be made either at the preparation stage of project development as part of the prioritisation of aims or at the time of choosing the designer or at the stage of choosing construction contractors. Manual of Construction Project Management for owners/clients is for prospective owners who either operate as clients themselves or who use the services of professional construction management companies. The aim is to help both owners and their construction partners understand what to expect from each other. The manual describes activities at the level of detail required to choose the management task or method to make the decision. It is not bound to regulations of any specific country and a detailed glossary makes it an indispensable worldwide reference.

Performance-Based Contracts for Road Projects Ashish Gajurel, 2013-08-30 This book focuses on the aspects of contracting contracts basically related to road construction and management contracts. The book presents an analytical study of Performance Based Road Management and Maintenance (PMMR), Funktionsbauvertrag (FBV), Function Based Construction Contract and Public Private Partnerships (PPP). A separate chapter is also included about the comparative study of these contract types. The book provides useful material for university libraries, construction companies and government departments of construction.

Field Manual for Oil and Gas Construction Contracts Management Edward Whitticks, 1994-01-01 The Field Manual for Oil and Gas Construction Contracts Management is written for major civil and engineering contractors and clients not only in the petrochemical industry but in any venture where contract terms are critical and construction claims may be encountered. The book approaches the contract from both client and contractor perspectives and gives practical advice on lessening vulnerability and the behind closed doors aspects of contract negotiation. It also includes tips on dealing with indigenous workforces, contract language and loopholes, quality control and contract closeout. Sample documents such as contract amendments and change orders are provided as well as eleven case studies and a glossary making this an ideal choice for a textbook. The Field Manual for Oil and Gas Construction Contracts Management is also well suited for use in seminars for clients, contractors, project managers and engineers.
