Larry Peterson, Carol A. Peterson, Lewis H. Melville, 2008 This easy to follow full colour guide was created for instructors teaching plant structure at the high school college and university levels It benefits from the experience of the authors who in teaching plant anatomy over many years came to realize that students learn best by preparing their own microscope slides from fresh plant samples The exercises contained in this book have been tested require minimal supplies and equipment and use plants that are readily available Detailed instructions are given for sectioning and staining of plant material The book contains a glossary of terms an index and a list of suppliers of materials required A CD ROM of all the illustrations is included for easy downloading

into PowerPoint presentations Although a number of new plant anatomy texts have been published in recent years none is as innovative exciting and user friendly as Teaching Plant Anatomy Through Creative Laboratory Exercises by Peterson Peterson and Melville What makes this book so usable from high school biology courses on through to upper level university plant structure labs is the wealth of experience that the authors have incorporated into this comprehensive clearly illustrated text Using mostly photomicrographs of hand sections and wonderfully clear colour illustrations they cover all aspects of plant structure from organelles to organs The book also outlines some easy to use techniques such as hand sections and clearings and macerations which will certainly be very useful for any plant related lab This book really does bring plant anatomy to life and will be a must for any course that deals with plant structure even if it s just to prepare plant material for molecular techniques An excellent contribution to any botanical teaching where you want your students to get a hands on approach to the subject Dr Usher Posluszny University of Guelph      The Publishers' Trade List Annual ,1881      Finding List of Books
