Corpus callosum -the process by which axons and dendrites become insulated with a coating of myelin, a fatty substance that speeds transmission of nerve impulses from neuron to neuron in the brain.

Myelination - the process by which axons and dendrites become insulated with a coating of myelin, a fatty substance that speeds transmission of nerve impulses from neuron-to-neuron in the brain.

Differences between gross

Gross Motor Skills

1. Involve large body movements such as running, climbing, jumping, and throwing.
2. Generally children learn motor skills from other children, rather than through adult instruction.
3. According to sociocultural theory, learning from peers is the best way for children to master skills they will need.

fine motor skills

Fine Motor Skills

1. Involve small body movements (especially those of hands and fingers), are much harder to master than gross motor skills.
2. Pouring juice into a glass, cutting food with a knife and fork and achieving anything more artful than a scribble with a pencil are difficult for young children, even with great concentration and effort.

Childhood accidents - Except in times of famine, more of the world's children die of accidents than any other cause. Worldwide, unintended injuries cause millions of premature deaths each year. Neurological immaturity makes young children unlikely to think things through, so they plunge into dangerous places and activities.

At about what age does formal instruction in reading, writing, and math begin around the world?

Child maltreatment - includes all intentional harm to, or avoidable endangerment of, anyone under 18 years of age.

Abuse - deliberate action that is harmful to the child's physical, emotional, or sexual well-being.

Neglect - failure to appropriately meet a child's basic physical or emotional needs.

intergenerational transmission

What 2 factors seem universally conducive to maltreatment?

foster care - legally sanctioned, publicly supported arrangement in which children are officially removed from their parents' custody and entrusted to another adult or family who is paid to nurture them.

permanency planning -legally sanctioned, publicly supported arrangement in which children are officially removed from their parents' custody and entrusted to another adult or family who is paid to nurture them.

kinship care - when a relative of the maltreated child becomes the approved caregiver, and issued for about one fourth of all foster children in the U.S.

primary - to keep all maltreatment of children from ever beginning.

secondary - spotting warning signs and intervening to keep a problematic situation from getting worse.

tertiary prevention of maltreatment - intervention done to reduce the harm done by actual abuse—which sometimes comes too late.

Chapter 9 The Play Years: Cognitive Development

Egocentrism - Piaget's term for a type of centration in which the young child contemplates the world exclusively from his or her personal perspective.

symbolic thinking

Piaget's preoperational thought - Piaget's term for cognitive development between the ages of about 2 and 6; characterized by centration (including egocentrism), focus on appearance, static reasoning, and irreversibility.

Centration - a characteristic of preoperational thought in which the young child focuses on one aspect of a situation to the exclusion of all others.

Irreversibility - a characteristic of preoperational thought in which the young child fails to recognize that reversing a process can sometimes restore whatever existed before the transformation occurred.

Conservation -the principle that the amount of a substance is unaffected by changes in its appearance.

Static reasoning

Vygotsky's guided participation - the adult or other mentor's aid in guiding the next step of learning, motivated by the learner's need for social interaction, the process by which young children, with the help of mentors, learn to think by having social experiences and by exploring their universe

apprenticeship in thinking - the preschooler's tendency to look to others for insight and guidance, particularly in the cognitive realm. Vygotsky's term for the young child whose intellectual growth is stimulated and directed by older and more skilled members of society.

scaffolding - the building blocks for learning put in place by a "teacher" (a more knowledgeable child or adult) or a culture. Learners use scaffolds and then discard them when they are no longer needed. - sensitive structuring of the young child's participation in learning encounters

zone of proximal development - Vygotsky's term for a range of skills that a person can exercise with assistance but is not quite able to perform independently.

Private speech- Vygotsky's term for the internal dialogue that occurs when people talk to themselves and through which new ideas are developed and reinforced.
