

82 Air conditioner

Air supply

You can select blower speeds from 1 to 4. The heating and ventilation become more and more effective as the air supply settings are increased. In position 0, the blower and the heater are switched off. By using position 0, you can totally block the interior ventilation outlets by pressing the button for the recirculated-air mode.

Temperature

In order to increase the temperature of the passenger compartment, turn it to the right (red). Temperature regulation will keep the interior temperature you have selected constant.

Air distribution

You can direct air to flow onto the windows , toward the upper body  and into the footwell . You can also make all intermediate settings. In the  setting, there is a low flow of air onto the windows to keep them free of condensation. The "6 o'clock" setting is recommended as a normal setting (refer also to the illustration and overview on page 90).

Rear window defroster

When the rear window defroster is activated, the indicator lamp comes on. The rear window defroster switches off automatically. Refer to page 72.

Air conditioner

The air is cooled and dehumidified and – depending on the temperature setting – reheated when the air conditioner system is switched on. Depending on the weather, the windshield may fog over briefly when the engine is started.

Use the button to switch the air conditioner off at outside temperatures below approx. 41 °F (-5 °C). This will help to prevent the windows from fogging up.

If the windows fog over after switching the air conditioner off, switch it back on.

Condensation forms in the air conditioner system during operation, which then exits under the vehicle. Traces of condensed water of this kind are thus normal.

Recirculated-air mode

You can respond to unpleasant external odors by temporarily blocking the outside air. The system then recirculates the air already within the vehicle.

If the windows fog over in the recirculated air mode, switch this mode off and increase the air supply as required.
