E-Government Strategy Executive Office Executive Office of the President of the United States of America, Executive Office of the President of the, 2014-11-10 We live in an increasingly interconnected society where the Internet has spawned tremendous improvements in efficiency and customer service People use the telephone and the Internet to get service 24 hours a day seven days a week More than 60 percent of all Internet users interact with government websites E Government will save taxpayers a significant amount of money while adding value to citizens experience with government and better serving their needs Consequently the President has made Expanding E Government integral to a five part Management Agenda for making government more focused on citizens and results Federal information technology IT spending in the United States will exceed 48 billion in 2002 and 52 billion in 2003 That level of IT spending provides enormous opportunities for making the transformation government into a citizen centered E Government Indeed a good portion of current federal IT spending is devoted to Internet initiatives yielding over 35 million web pages online at over 22 000 web sites But past agency centered IT approaches have limited the government s productivity gains and ability to serve citizens As highlighted in this report the federal government is poised to transform the way it does business with citizens federal government check budget through the use of E Government This report presents the federal government s action plan for E Government The primary goals for the President s Expanding E Government initiative are to Make it easy for citizens to obtain service and interact with the federal government Improve government efficiency and effectiveness and Improve government s responsiveness to citizens OMB Director Mitchell E Daniels initiated an interagency E Government Task Force see Appendix A to identify the action plan for implementing the President s E Government initiative Under the leadership of Mark Forman Associate Director of Information Technology and E Government about 80 federal employees from across the federal government made up the Task Force see Appendix B The E Government Task Force found that the federal government could significantly improve customer service over the next 18 to 24 months by focusing on 23 high payoff government wide initiatives that integrate agency operations and IT investments subsequently

payroll processing was added as the 24th E Government initiative These initiatives could generate several billion dollars in savings by reducing operating inefficiencies redundant spending and excessive paperwork The initiatives will provide service to citizens in minutes or hours compared to today s standard of days or weeks Moreover by leveraging IT spending across federal agencies the initiatives will make available over 1 billion in savings from aligning redundant investments Building Digital Government Strategies Rodrigo Sandoval-Almazán,Luis F. E-government Strategy, 2004 *Implementing and Managing eGovernment* Richard Heeks, 2005-10-18 Two years ago I taught an introductory level course on eGovernment. If only I had had this book to draw upon at the time I strongly recommend this text to students of eGovernment whether in universities or the public sector. Each can read the book at a different level and can reap significant gain from the variety of material available. The chapters are well organized as is the comprehensive index while academic readers will appreciate the extensive bibliography. Information Technology for Development: Implementing and Managing eGovernment fills an important gap. It provides comprehensive coverage of the e-government issues faced by managers, consultants, and other practitioners. Richard Heeks draws on international examples to guide readers through crucial e-government management issues such as the management of strategy and projects, data security, quality, people, money, and policies, and dealing with political and ethical challenges. The second part of the book focuses on the implementation of e-government systems. It explores activities such as feasibility studies, system analysis, system design, construction, and marketing. Instructive diagrams, synoptic models, and case studies underpin the book's content while class and practitioner assessments will help readers monitor their understanding. Additional material is also available on a companion Website. This book will be welcomed by students pursuing an MPA, undergraduates studying public policy and administration, and practitioners on government in service training.

The Information Ecology of E-government V. J. J. M. Bekkers, Vincent Homburg, 2005 It seems that only a short time ago numerous academics and practitioners in the field were somewhat blinded by the

successes of the dot com developments in the private sector and some of them enthusiastically claimed that public administration was to be revolutionized But that did not happen and also the dot com soap bubble burst This suggests that there is much yet to be learned about innovation in public administration especially about innovations at the cornerstones of technological and institutional transformations New and more fully developed formulations of theory into practice are needed The goal of the editors of this book is to contribute to some aspects of the understanding of e government In order to understand electronic government one has to scrutinize the various environments and contexts in which e government is developed and implemented As such it builds upon the biological and environmental lines of reasoning that have been suggested by authors like Bonnie Nardi and Vicky O Day and Thomas Davenport and Laurence Prusak

Comparative E-Government Christopher G. Reddick, 2010-08-19 Comparative E Government examines the impact of information and communication technology ICT on governments throughout the world It focuses on the adoption of e government both by comparing different countries and by focusing on individual countries and the success and challenges that they have faced With 32 chapters from leading e government scholars and practitioners from around the world there is representation of developing and developed countries and their different stages of e government adoption Part I compares the adoption of e government in two or more countries The purpose of these chapters is to discern the development of e government by comparing different counties and their individual experiences Part II provides a more in depth focus on case studies of e government adoption in select countries Part III the last part of the book examines emerging innovations and technologies in the adoption of e government in different countries Some of the emerging technologies are the new social media movement the development of e participation interoperability and geographic information systems GIS
