a celebration of our planet the environmental goods and services it provides and the need to maintain our local to global environment in such a manner that these goods and services will continue to be provided in the centuries to come Toward that end it is necessary to understand the mechanisms that provide these services as well as the means by which they can be perturbed or destroyed This book is written with that in mind focusing on the science that controls the land water and air upon which we depend rather than the many horror stories that could be written about what happens when we ignore or abuse the various aspects of the planet we call home With facts and figures at everyone s fingertips in the form of smartphones and more there is no need for a book to be cluttered with such discussions as the size of the last oil spill but rather the focus here is on understanding how for example the greenhouse effect works what drives ozone formation and how ozone depletion leads to cancer and how a photoelectric cell can convert sunlight into electricity The book is written for non science majors and does not assume any environmental background As such it is intended to promote a broad public that is sufficiently scientifically literate to make informed decisions in their jobs homes and purchasing that help us all move toward a more sustainable future
