Advanced Techniques in Computing Sciences and Software Engineering Khaled Elleithy, 2010-03-10 Advanced Techniques in Computing Sciences and Software Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Software Engineering Computer Engineering and Systems Engineering and Sciences Advanced Techniques in Computing Sciences and Software Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2008 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2008 **Joining Technology and Application of Advanced Materials** Yajiang Li, 2023-05-16 The book focuses on joining of advanced materials such as ceramics intermetallics laminated materials composite materials and functional materials considering both in theory and in practice It also covers details of joint design weldability and quality assurance of the product Both principles and engineering practice have been addressed to show advanced scientific and novelty features The latest research on advanced joining technology is one of the major features of the book which is particularly suited for readers who are interested to learn practical solutions in joining of advanced materials The book can benefit researchers engineers and graduate students in the fields of joining materials design and manufacturing etc *Advanced Statistical Methods* Sahana Prasad, 2024-05-11 This is the second book of the two volumes covering the advanced statistical methods and analysis Significant topics include advanced concepts in regression index numbers time series and vital statistics The book includes useful examples and exercises as well as relevant case studies for proper implementation of the discussed tools This book will be a valuable text for advanced undergraduate students of statistics management economics and psychology wanting to gain advanced understanding of statistics and the usage of its various concepts *Circuit-Technology Co-Optimization of SRAM Design in Advanced CMOS Nodes* Hsiao-Hsuan Liu, Francky Catthoor, 2024-12-20 Modern computing engines CPUs GPUs and NPU require extensive SRAM for cache designs driven by the increasing demand for higher density performance and energy efficiency This book delves into two primary areas within ultra scaled technology nodes 1 advancing SRAM bitcell scaling and 2 exploring innovative subarray designs to enhance power performance area PPA metrics across technology nodes The first part of the book utilizes a bottom up design technology co optimization DTCO approach employing a dedicated PPA simulation framework to evaluate and identify the most promising strategies for SRAM bitcell scaling It offers a comprehensive examination of SRAM bitcell scaling beyond 1 nm node outlining a structured research cycle that includes identifying scaling bottlenecks developing cutting edge architectures with complementary field effect transistor CFET technology and addressing challenges such as process integration and routing complexities Additionally this book introduces a novel write margin methodology to better address the risks of write failures in resistance dominated nodes This methodology accounts for time dependent parasitic bitline

effects and incorporates timing setup of write assist techniques to prevent underestimating the yield loss In the second part the focus shifts to a top down DTCO approach due to the diminishing returns of bitcell scaling beyond 5 node at the macro level As technology scales increasing resistance and capacitance RC lead designers to adopt smaller subarray sizes to reduce effective RC and enhance subarray level PPA However this approach can result in increased inter subarray interconnect overhead potentially offsetting macro level improvements This book examines the effects of various subarray sizes on macro level PPA and finds that larger subarrays can significantly reduce interconnect overhead and improve the energy delay area product EDAP of SRAM macro The introduction of the active interconnect AIC concept enables the use of larger subarray sizes while integrating carbon nanotube FET as back end of line compatible devices results in macro level EDAP improvements of up to 65% when transitioning from standard subarrays to AIC divided subarrays These findings highlight the future trajectory of SRAM subarray design in deeply scaled nodes

Advanced Welding Techniques Himanshu Vashishtha, Deepak Kumar, Ravindra V. Taiwade, 2024-09-11 To meet weight quality and cost targets it is essential to design develop and manufacture optimal cost effective welded structures that take into consideration material process and dimensioning procedures For effective design a weld designer must have a comprehensive grasp of welding basics associated metallurgy and fabrication and characterization processes *Advanced Welding Techniques* highlights breakthroughs in advances in welding methods and provides readers with the ability to accurately identify the appropriate welding processes and optimal improvement methods for intended applications It offers comprehensive guidance on welding design to ensure readers are equipped to provide solutions to any technical malfunctions they may encounter including Supplies essential stepwise knowledge on design for welding starting with the fundamentals to the complex Covers role of filler metals and parameters on welding performance emerging and advanced welding techniques and advantages and limitations of various methods Discusses integration of additive manufacturing and welding Contains practical applications Considers challenges and future scope for further research as well as future challenges This book offers students academics researchers scientists engineers and industry experts a comprehensive overview of the most recent breakthroughs in advanced welding methods and their applications to joining various metals and their alloys

Global Economic Prospects, June 2025 World Bank, 2025-06-10 The global economy is facing another substantial headwind emanating largely from an increase in trade tensions and heightened global policy uncertainty For emerging market and developing economies EMDEs the ability to boost job creation and reduce extreme poverty has declined Key downside risks include a further escalation of trade barriers and continued policy uncertainty These challenges are exacerbated by subdued foreign direct investment into EMDEs Global cooperation is needed to restore a more stable international trade environment and scale up support for vulnerable countries grappling with conflict debt burdens and climate change Domestic policy action is also critical to contain inflation risks and strengthen fiscal resilience To accelerate job creation and long term growth structural reforms must focus on raising

institutional quality attracting private investment and strengthening human capital and labor markets Countries in fragile and conflict situations face daunting development challenges that will require tailored domestic policy reforms and well coordinated multilateral support
