**An Introduction to Aircraft Thermal Management** Mark Ahlers, 2019-04-14 Aircraft Thermal Management ATM focuses on how to manage heat in an aircraft to meet the temperature requirements for passengers and vehicle. This primarily involves removing heat and protecting equipment systems and structure from heat sources that could raise their temperature beyond design limits. Crew and passengers must be neither too hot nor too cold during airplane operations. Thus maintaining thermal comfort is critically important and not a trivial operation. Written by Mark F Ahlers, a retired Boeing Technical Fellow and its first Thermal Marshal, *An Introduction to Aircraft Thermal Management* is the ultimate source of knowledge concerning temperature and thermal related requirements. Airplane generated heat sources, external heat sources, aircraft heat sinks, fire and failures, environmental control systems, thermal design, analytical modeling, analytical software, testing, military aircraft thermal management. Fully illustrated and amply referenced, *An Introduction to Aircraft Thermal Management* provides a very balanced approach between theory and practice, best practices and technical insights. It is a must-have reference for both young engineers starting in the field and for seasoned professionals willing to re-sharpen their skills.

**Law and Regulation of Air Cargo** Ruwantissa Abeyratne, 2018-07-23 This book explores the legal and regulatory aspects of the complex air cargo sector, discussing in detail the general principles of the carriage of air cargo, artificial intelligence and air cargo facilitation, carriage of hazardous goods, human remains and animals, as well as cargo security, price fixing and anti-competitive conduct in air cargo operations, liability issues, the air cargo supply chain and contract of carriage. It also discusses related achievements of the International Civil Aviation Organization, the International Air Transport Association and Airports Council International. The value of goods carried by airlines represents 7.4% of the global Gross Domestic Product. While cargo carried by air accounts for less than 1% of global cargo carriage, airlines carry 35% of the value of world trade, making this industry highly valuable and efficient and the most reliable way to transport goods throughout the world. On average, airlines transport 52 million metric tons of goods per annum, worth an equivalent of 6.8 trillion, i.e. 18.6 billion, worth of goods daily.
