**Community Series in Towards Precision Medicine for Immune-Mediated Disorders: Advances in Using Big Data and Artificial Intelligence to Understand Heterogeneity in Inflammatory Responses, volume II** Alex Tsoi,Xu-jie Zhou,Yasmina Laouar,2025-01-27

The ability to understand the underlying mechanisms that drive the heterogeneity in inflammatory responses among patients suffering from immune mediated conditions is critical The nature of the immune mechanism ranges from the degree of immune cell activation to the HLA genotypes and the intensity of responses of target tissues to cytokines High throughput experiments have generated significant information for us to facilitate the identification of disease associated components for different complex immune mediated conditions e g psoriasis lupus rheumatoid arthritis inflammatory bowel diseases and the advances in biotechnologies and efficiency in computational resources have further promised cost effective opportunities to simultaneously study the different aspects in the basic and translational domains of these human diseases The critical questions we face are to provide efficient inference to integrate these datasets and translate what we have learned from the disease associated components to understand the heterogeneity e g ethnic gender genetic differences in disease manifestation and prognosis of these immune mediated conditions Translating and integrating big data to understand the intrinsic factors that shape the different unique natures of inflammation processes require an efficient and flexible framework to incorporate signatures of different types
