Book Cradle To Cradle:

Cradle to Cradle William McDonough, Michael Braungart, 2010-03-01 A manifesto for a radically different philosophy and practice of manufacture and environmentalism Reduce reuse recycle urge environmentalists in other words do more with less in order to minimize damage But as this provocative visionary book argues this approach perpetuates a one way cradle to grave manufacturing model that dates to the Industrial Revolution and casts off as much as 90 percent of the materials it uses as waste much of it toxic Why not challenge the notion that human industry must inevitably damage the natural world In fact why not take nature itself as our model A tree produces thousands of blossoms in order to create another tree yet we do not consider its abundance wasteful but safe beautiful and highly effective hence waste equals food is the first principle the book sets forth Products might be designed so that after their useful life they provide nourishment for something new either as biological nutrients that safely re enter the environment or as technical nutrients that circulate within closed loop industrial cycles without being downcycled into low grade uses as most recyclables now are Elaborating their principles from experience re designing everything from carpeting to corporate campuses William McDonough and Michael Braungart make an exciting and viable case for change

Glocalized Solutions for Sustainability in Manufacturing Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources

required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering (LCE 2011) serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.

Product Design and Sustainability Jane Pentty, 2019-08-19. Whether it is the effects of climate change, the avalanche of electronic and plastic waste or the substandard living and working conditions of billions of our fellow global citizens, our ability to deal with unsustainability will define the twenty-first century. Given that most consumption is mediated through products and services, the critical question for designers is: How can we radically reshape these into tools for sustainable living? As a guide and reference text, *Product Design and Sustainability* provides design students, practitioners and educators with the breadth and depth needed to integrate the most appropriate sustainable strategies into their practice. It establishes the principles that underpin sustainability and introduces a diverse range of social, economic and environmental design responses and tools available to designers. The numerous real-world examples illustrate how these strategies play out in different product sectors and reinforce the view that sustainability is the most positive opportunity and creative challenge facing designers today. This book delivers a comprehensive guide to the principles of sustainability and how they apply to product design that can readily be integrated into curricula and design practice. It reveals many of the issues specific product sectors are facing and provides the depth and breadth needed for formulating and developing sustainable design strategies to address these issues. It empowers

and inspires designers to engage with sustainability through its many examples and insightful interviews with practitioners is fully illustrated with over 300 photographs graphs and diagrams and supported by chapter summaries annotated further reading suggestions and a glossary
