The electromagnetic spectrum is made up of the different wavelengths of electromagnetic energy. The sun is the major source of _____ energy in our solar system. The nuclear reactions taking place in the sun give off incredible amounts of energy which includes radiation of many different wavelengths and each type of radiation has unique properties.

Gamma ray radiation is very dangerous because it carries very high levels of energy. Luckily for us the layers of the atmosphere block most of this type of radiation. The main sources of gamma ray radiation on earth are man-made nuclear weapons and nuclear plant meltdowns or gamma radiation that is used by doctors to treat some cancers.

_____, _____ radiation is the next shortest wavelength in the EM spectrum. This type of radiation has a lot of energy too and can be dangerous if humans are exposed to a lot of x-rays in their life. This radiation type is very helpful to medicine because it allows us to treat broken bones and to see cavities in teeth.

Next on the spectrum comes _____ radiation. This type of radiation has a wavelength that is still pretty short. It is another type of dangerous radiation, it can cause sunburn and skin cancer. Our ozone layer blocks out some but not all of the ultra violet radiation coming from the sun. This type of radiation is invisible to us, but many insects including bees can see it.

Visible light is the type of electromagnetic radiation that we are the most familiar with. This type of radiation is the one we can detect with our sense of sight. The rainbow colors that make up the visible light wavelengths are:

- _____
- _____
- _____
- _____
- _____
- _____
- _____

The color of visible radiation with the shortest wavelength is violet (purple). Red has the longest wavelength of all the colors and so it is considered to be the color with the least energy.

topics aren't just subjects to study in school but are an integral part of their daily lives. Features include Easy to understand explanations of a foundational physical science topic. A ton of interesting examples demonstrate how human ingenuity has put scientific knowledge to work. Covers electromagnetic radiation which is a core idea in the Next Generation Science Standards at both the middle school and high school levels.

Exploiting the Electromagnetic Spectrum, 2004 **Cumulative Author Index to Psychological Abstracts**, 1978 EM Spectrum Jeremiah Hilderman, 2021-05-04

The book reassesses the Kelvin temperature scale by spectrum for wider application. The idea occurred to the author to revise the temperature scale where the Kelvin scale is no longer practical because a true temperature scale must be based upon electromagnetic radiation and the Kelvin scale is not based on the EM Spectrum. The Kelvin scale is based on a foggy notion of absolute zero temperature in which there is no motion inside of atoms. Kelvin's scale is based on no motion, not on the electromagnetic spectrum and thus is flawed. So in the pursuit of a true scale I ventured into a review of the Electromagnetic Spectrum and several new ideas came forth. The most astounding of these new ideas is the bifurcation of the spectrum into radio waves versus all other waves of EM.
